summary: _____

Opened:	Opened when L05D1-274 came down on the wall.
Limits(N)	F05D1-278
(S)	L05D1-298, W05D1-296
(E)	F05D1-278
(W)	Fill below F05D1-271 (no locus number)
Closed:	Not closed at end of season.
Matrix:	At least two courses of ashlar; the upper consists of three large ashlar. The second course is ashlar with plaster on top (probably in reuse). The second course was not fully exposed this season.
Relations:	<p>W05D1-277 is covered by L05D1-274.</p> <p>In the North and East F05D1-278 reaches W05D1-277.</p> <p>In the West, W05D1-277 continues under the fill beneath F05D1-271.</p> <p>In the South, L05D1-298 reaches W05D1-277. W05D1-296 also abuts the lower course of W05D1-277 in the south.</p>

summary: _____

Opened: When L05D1-276 came down on same rubble fill as L05D1-275, the two loci were collapsed into L05D1-282.

- Limits(N)** W05D1-277
- (S) Square AV/16
- (E) L05D1-309
- (W) Fill below F05D1-271

Closed: When locus came down upon northern half of tabun L05D1-264 and its fill, L05D1-265.

Matrix: Dry gray soil with large amount of both pottery and field stones.

Relations: L05D1-282 is covered by L05D1-275 and L05D1-276.
 Locus covers L05D1-289, the tabun L05D1-264, and its fill L05D1-265. It is likely part of the same fill as L05D1-265.

In the North, L05D1-282 reaches W05D1-277.
 in the West, L05D1-282 reaches fill below F05D1-271 (unexcavated; no locus number).
 In the East, L05D1-282 is adjacent to L05D1-309, excavated later in the season.

Additional Observations/Value:

Same rubble construction fill as L05D1-275, L05D1-276 and L05D1-289. Low value.

summary: _____

Opened:	When L05D1-287 came down on stones forming the drain, L05D1-293.
Limits(N)	Baulk
(S)	Fill below F05D1-284 (= F05D1-278) and its makeup L05D1-286 (paving stones)
(E)	L05D1-295
(W)	L05D1-294
Closed:	Closed at end of season. Locus is not yet completely dug.
Matrix:	The drain itself is composed of small, roughly formed ashlar. It is filled with the loose, brown, nearly sterile soil comprising L05D1-287.
Relations:	L05D1-293 is covered by L05D1-287. L05D1-293 passes under the paving stone floor makeup of F05D1-284, L05D1-286 (F05D1-284 = F05D1-278). The large robber trench L05D1-288 cuts L05D1-293. In the South, L05D1-293 is again visible, with two stones protruding from the fill below L05D1-283, the floor makeup of F05D1-278. In the East, L05D1-295 reaches the drainwall. In the West, L05D1-294 reaches the drainwall.

Additional Observations/Value:

The bottom of the drain may have been reached since stones were detected. However, excavation in the Western half of AV/17 ceased before full investigation could be made.

summary: _____

Opened:	Opened when L05D1-284 came down upon the ashlar forming the northern portion of F05D1-278 (floor makeup = L05D1-286).
Limits(N)	L05D1-286, L05D1-293
(S)	L05D1-283, L05D1-293
(E)	L05D1-274
(W)	Fill below F05D1-271
Closed:	Closed when locus came down upon pavement.
Matrix:	Loose brown soil with some field stones but very little pottery. Floor below is a tightly packed ashlar pavement.
Relations:	L05D1-288 is covered by L05D1-284. In the North, L05D1-288 cuts F05D1-284 and its paving stone makeup, L05D1-286 (F05D1-284 = F05D1-278). In the South, L05D1-288 cuts F05D1-278 and its paving stone makeup, L05D1-283. In the East, L05D1-288 is adjacent to L05D1-324, the continuation of the robber trench excavated later in the season. L05D1-288 also cuts the drain, L05D1-293, which runs North-South under the paving stones. F05D1-288 extends over the entire area of the locus.

Additional Observations/Value:

L05D1-288 is a massive robber trench which removed over a meter of ashlar paving stones, likely a British army trench. The fill deposited after this robbing action was nearly sterile soil.

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened: Opened when L05D1-284 came down on F05D1-284 (F05D1-284 = F05D1-278). L05D1-287 is the fill north of this floor.

Limits(N)	Baulk
(S)	L05D1-286
(E)	L05D1-318
(W)	Fill below F05D1-271

Closed: Closed when locus came down upon drain, L05D1-293.

Matrix: Loose brown soil with some field stones but very little pottery.

Relations: Locus covers the drain L05D1-293 and fills L05D1-294 and L05D1-295. Locus cuts the paving stone floor makeup (L05D1-286) of F05D1-284 (F05D1-284 = F05D1-278).

L05D1-287 is adjacent to the unassigned fill below F05D1-271.

L05D1-287 is adjacent to L05D1-318.

Additional Observations/Value:

L05D1-287 is likely part of the same construction fill as L05D1-288.

summary: _____

Opened: Opened when L05D1-284 came down upon paving stones L05D1-286, the makeup of F05D1-284 (= F05D1-278).

- Limits(N)** L05D1-287, L05D1-325
- (S) L05D1-288, L05D1-324
- (E) Baulk
- (W) Fill below floor makeup of F05D1-271

Closed: Closed at end of season. Unexcavated.

Matrix: Large, rectangular, kurkar ashlar.

Relations: L05D1-286 is covered by L05D1-284 and L05D1-320.

In the North, L05D1-286 reaches L05D1-287 and L05D1-325.
 In the South, L05D1-286 (= F05D1-278) is cut by the large robber trench L05D1-288.
 In the East, L05D1-286 continues into the baulk.
 In the West, L05D1-286 reaches the unexcavated fill below the makeup of F05D1-271.

Additional Observations/Value:

Ashlar paving stones; low value.

Opened: Opened when L05D1-320 came down on F05D1-284.

Limits(N) L05D1-286

(S) L05D1-283

(E) Baulk

(W) L05D1-288

Closed: Closed at end of season.

Matrix: Loose brown soil with a large amount of medium to large field stones near the top but very little pottery.

Relations: L05D1-324 is covered by L05D1-320

In the North, L05D1-324 cuts F05D1-284 (= F05D1-278), and its makeup L05D1-286.
 In the South, L05D1-324 cuts F05D1-278 and its makeup L05D1-283.
 In the West, L05D1-284 is adjacent to L05D1-288, excavated earlier in the season.

Additional Observations/Value:

L05D1-324 is the Eastern continuation of L05D1-288, a massive robber trench (British trench) which removed many paving stones from F05D1-278. The soil deposited after this robbing action is almost sterile after the initial carpet of rubble.

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened:	Opened to excavate the changed soil below original top soil (L05D1-270).
Limits(N)	Baulk
(S)	Baulk
(E)	L05D1-309
(W)	Baulk
Closed:	Closed when L05D1-271 came down upon the remains of a floor of cobbles and crushed kurkar running along the E. Baulk (F05D1-271).
Matrix:	Looser, moister brown soil with some rocks and some pottery in the northern half of the square; drier, rocky soil with larger amount of pottery in southern half of square.
Relations:	L05D1-271 covers dirt locus L05D1-274. F05D1-271 continues into the baulk to N, W, S. To the East, F05D1-271 is cut or otherwise disturbed. No robber trench was observed, though it is clear that the floor and its makeup were robbed out. In the East, L05D1-271 is adjacent to L05D1-309 (the eastern half of the square was excavated later in the season). It is impossible to to tell the floor's eastern extent.

Additional Observations/Value:

F05D1-271 was not removed but its makeup and cobble fill are visible. The makeup is of small-to-medium sized field stones in a plaster matrix. The fill below is the loose, brown, nearly sterile dirt which composed L05D1-288 and L05D1-287. Given that F05D1-271 lies intact above L05D1-288, the British trench, F05D1-271 must be associated with the Israeli military activity of the mid to late 20th century.

summary: _____

Opened: Opened when L05D1-289 came down on the westernmost ashlar of the wall.

Limits(N) L05D1-283

(S) L05D1-297, L05D1-319

(E) Baulk

(W) L05D1-297, L05D1-298

Closed: Not closed at end of season.

Matrix: Lare rectangular kurkar ashlar.

Relations: W05D1-296 is covered by L05D1-289 and L05D1-316.
 In the East, W05D1-296 continues into the baulk.
 In the Southwest, W05D1-296 is cut by L05D1-297.
 In the South, W05D1-296 reaches L05D1-319.

Additional Observations/Value:

W05D1-296 is the eastern turn of the 'Monument' wall, W16580.

summary: _____

Opened:	Opened as sealed fill below floor makeup L05D1-256.
Limits(N)	Balk
(S)	L05D1-258, L16002 in AT/14, L16113 in AS/14
(E)	W16127
(W)	L16985, W05D1-272
Closed:	L05D1-263 came down on a fragmentary floor.
Matrix:	Medium-brown soil containing many common shells, pottery sherds, and 10-15cm field stones. 22 buckets from this locus were wet-sifted (baskets #05D1-2524, 05D1-2525, 05D1-2526, #05D1-2527). F05D1-263 was a patchy plaster floor. Modern glass was found in this locus, but in an area where a fence stake had been sunk, and where two large weed roots were growing.
Relations:	To the east, L05D1-263 reaches W16127. To the south, L05D1-263 is cut by sand layer L05D1-258 and probably by excavation in the 1995 season. To the west, L05D1-263 is adjacent to L16985. To the west, F05D1-263 reaches W05D1-272 on its north and east faces. To the east, F05D1-263 may reach W16127, but the relations are unclear. To the south, F05D1-263 is cut, probably by excavation in the 1995 season.

Additional Observations/Value:

SEALED LOCUS covering a floor, but with possible disturbance.

summary: _____

Opened: Opened as floor makeup and fill below F05D1-291.

Limits(N) Balk, L05D1-281.

(S) L16014 and L16063 in AT/14.

(E) W16127

(W) W05D1-272 and L16985 in AU/15.

Closed: L05D1-300 came down on W05D1-314 and W05D1-315.

Matrix: Medium brown soil, many pockets of grey ash-like soil, and some layers of black soot-like soil. Contained many field stones and large rocks, the largest being about the size of a melon. Contained a moderate amount of pottery sherds and one lamp fragment. A few pieces of Roman glass. Some of the pottery sherds and bone fragments showed evidence of burning.

Relations: To the east, L05D1-300 reaches W16127.
 To the west, L05D1-300 reaches W05D1-272 and is adjacent to L16985 in AU/15.
 To the south, L05D1-300 is adjacent to L16014 and L16063 in AT/14.

 In its northwest quadrant, L05D1-300 reaches socket stone L05D1-281.
 In its southwest quadrant, L05D1-300 reaches socket stone L05D1-290.

 *Also below this locus: L05D1-306, L05D1-307, L05D1-308, W05D1-314, and W05D1-315.

Additional Observations/Value:

A low value fill locus.

F05D1-291 was evident in small patches of 30 cm or less in length, but in all regions of the locus.
Relations:	To the east, L05D1-291 reaches W16127. To the west, L05D1-291 is adjacent to L05D1-292. To the south, L05D1-291 is adjacent to L16063 in AT/14. In the southwest quadrant, L05D1-291 reaches socket stone L05D1-290. To the east, F05D1-291 reaches W16127. To the west, F05D1-291 may reach W05D1-272, but the relations are unclear. In its southwest quadrant, F05D1-291 clearly reached the south and east faces of socket stone L05D1-290. To the south, F05D1-291 is cut by L16014 and L16063 in AT/14.

Additional Observations/Value:

Low value fill locus down to a patchy floor.

(W)	W05D1-315
Closed:	End of season.
Matrix:	Loose, medium-brown soil containing a few pieces of charcoal, one piece of glass slag, a chunk of yellow (phosphorous?) material, and one piece of very high-fired, burned ceramic. A moderate amount of pottery sherds, glass sherds, and bone fragments were in this matrix. A layer of large rocks (the size of a melon and smaller) were at an elevation of about 14.70-14.64. One rock colored pink from heat exposure (about 1.5cm in diameter) was in the matrix. The lowest elevation may have a phytolith layer (a whitish lens appeared in the northeast quadrant).
Relations:	To the north, L05D1-322 reaches W05D1-311. To the south, L05D1-322 reaches W05D1-321. To the east, L05D1-322 reaches W05D1-314. To the west, L05D1-322 reaches W05D1-315.

Additional Observations/Value: High value. Lower elevations of a fill inside an installation.

summary: _____

Opened: L05D1-303 and L05D1-304 came down on W05D1-311. L05D1-310 was opened as unsealed fill north of the wall.

Limits(N) Balk

(S) W05D1-311, L05D1-305, L05D1-312, W05D1-272, W05D1-313

(E) W16127

(W) W05D1-272, L16998 in AU/15.

Closed: Came down on F05D1-310.

Matrix: Medium-brown, hard-packed soil containing large rocks and ashlar, plaster chunks, a moderate concentration of pottery sherds, a substantial amount of bone fragments, a few glass sherds, and a few pieces of charcoal. There was a large chunk of plaster-backed pebble subflooring in the western end of the locus; a stone sculptural fragment depicting a wing (basket #05D1-2821) was beneath the chunk. F05D1-310 is a substantial concrete floor covering an ashlar pavement in the west. The floor extends over the wall plaster that is extant on the north face of W05D1-311 and partially covers the top course of the wall. There is a ridge of concrete in the floor where it once reached an ashlar (now lost) of W05D1-313 along the wall's east face.

Relations: To the east, L05D1-310 reaches W16127.
To the south, L05D1-310 reaches W05D1-311.
To the west, L05D1-310 reaches W05D1-272.

To the south, F05D1-310 reaches and partially covers W05D1-311.
To the west, F05D1-310 reaches W05D1-313.
To the east, F05D1-310 reaches W16127.
To the north, F05D1-310 continues into the balk.

****Additional photos: p05D1-9105.jpg, p05D1-9100.jpg

Additional Observations/Value:

A high value locus. Fill came down on a floor that reaches the outer walls of an installation. This locus contained the STONE SCULPTURAL FRAGMENT DEPICTING A WING.

Opened: Beginning of excavation

Limits(N) Balk

(S) Balk

(E) L16981 in AU/15

(W) Balk

Closed: L05D1-250 came down on F05D1-250.

Matrix: Medium brown hard-packed soil with moderate amount of pottery sherds, lots of crushed plaster floor makeup, and more than three full buckets of roof tiles. One 3cm piece of colorless fresco. F05D1-250 was a cobblestone floor (stones of about 15cm in diameter) with a very patchy plaster surface.

Relations: To the east, F05D1-250 reaches W16127.
 L05D1-250 covers F05D1-250.
 The makeup of F05D1-250 is L05D1-256.
 To the south, F05D1-250 is cut, probably by excavation in the 1995 season.
 To the west, F05D1-250 is adjacent to L16981 in AU/15.
 F05D1-250 covers and seals floor makeup L05D1-256.

***Additional photos: p05D1-9086.jpg

Additional Observations/Value:

Low value: surface soil over a cobblestone floor.

summary: _____

Opened:	L05D1-015 came down on first course of W05D1-034.
Limits(N)	L05D1-036
(S)	L05D1-048
(E)	Baulk
(W)	L04D1-040
Closed:	End of season, bottom of wall was not reached.
Matrix:	<p>Only three flat ashlar remained of the first course of W05D1-034. Under the robber trench L05D1-048 and east/west robber trench L05D1-036 in the north, the first foundation course contained smaller stones fairly evenly cut and spaced. In 2005, only three courses of the foundation were uncovered, but it appears to extend further. The building style employs more evenly and larger cut stones in the south with smaller and more rounded stones in the north. Muddy soil was used to hold the stones together, with small amounts of concrete in a few places.</p>
Relations:	<p>Robber trench L05D1-048 and the east/west robber trench in the north L05D1-036 cut the upper course and came down on the second course of W05D1-034.</p> <p>L05D1-087 is the foundation trench of W05D1-034.</p> <p>W05D1-034 extends into the northern baulk, yet ends 3.5 m. south at foundation trench L05D1-087 and possibly makes a corner and extends into the baulk.</p> <p>It is unclear if W05D1-034 cut F05D1-060 or if F05D1-060 reached the wall. There are two possibilities:</p> <ol style="list-style-type: none"> 1) W05D1-034 and foundation trench L05D1-087 cut F05D1-060, making F05D1-060 an earlier floor with a later building installation cutting F05D1-060. 2) F05D1-060 reached W05D1-034 and due to erosion next to the wall and a slight sinking of the floor, the relations of the F05D1-060 and W05D1-034 were lost. If this is the case, F05D1-060 and W05D1-034 are contemporaneous.

Additional Observations/Value:

W05D1-034 is also photographed under numbers P05D1-9051 and P05D1-9068. W05D1-034 is a possible phase 2 wall.

summary: _____

Opened:	To excavate the floor makeup below F04D1-170.
Limits(N)	L05D1-035, L05D1-036
(S)	L05D1-017, L05D1-049
(E)	L05D1-048, baulk
(W)	W04D1-076, L05D1-047, L05D1-186, L05D1-017
Closed:	Removed floor makeup.
Matrix:	L05D1-040 contained mainly shells with a little pottery and some bone under the plaster floor. The soil was light in color and loose. L05D1-040 was removed as a sealed locus and wet sifted with 1 mm. screens. Samples were also taken by the Weizmann Institute of the floor and the makeup. The results are catalogued in basket numbers 05D1-0180 through 05D1-0184.
Relations:	<p>L05D1-040 is sealed by F04D1-170.</p> <p>L05D1-040 is cut by robber trench L05D1-036 in the north-east. It is also cut by the southern British trench 05D1-017 and robber trench L05D1-048, along with fills L05D1-035 and L05D1-016. L05D1-016 cuts L05D1-040 because it is a collapsed area of floor F04D1-170. L05D1-040 is cut by W04D1-076 in the north.</p> <p>As the floor makeup of F04D1-170, the relations between L05D1-040, possible pavement L04D1-186 and possible robber trench L05D1-047 are unclear, but these are the possibilities:</p> <ol style="list-style-type: none"> 1) L05D1-186 could be a wall, of which L05D1-047 is the robber trench, and the wall could have been built on the F04D1-170, then F04D1-177 might have reached the wall. But, when the wall was robbed, the F04D1-177 was detached, so that L05D1-018 contains part of the robber trench for wall. 2) L05D1-186 could be a paving built on top of F04D1-170 and is paving which F04D1-177 reached. 3) F05D1-170 could have reached possible wall L05D1-186 and which it was robbed the relation could have been disturbed. 4) Possible wall L05D1-186 could have cut both F04D1-177 and F04D1-170. L05D1-018 then contained part of the robber trench and is disturbed.

Locus Car

DOR 2005

L **05D1-040** 2005 *Area* D1 *Sq:* AR- /16- *Loc. type:* Floor makeup

Northern floor makeup L05D1-049 is probably the same deposit as floor makeup L05D1-040 because it has the same matrix, yet is cut by W04D1-076. F05D1-033 is probably the same floor as F04D1-170 because it has the same elevations, matrix and connected in a strip along the eastern baulk. Floor makeup L05D1-040 of F04D1-170 was distinguished from floor makeup L05D1-049 of F05D1-033 as a technical separation because it was cut by the British trench L05D1-017.

Floor makeup L05D1-040 came down on fill below floor makeup L05D1-060. L05D1-047 and L05D1-056 in the east also came down on fill similar in matrix and elevation to L05D1-040 and therefore L05D1-047, L05D1-056 and L05D1-040 all came down on fill L05D1-060.

Additional Observations/Value:

High value: sealed floor makeup.

summary: _____

Opened: Opened to continue excavation of British trench L05D1-133 from 2004.

Limits(N) Baulk

(S) AR/16

(E) L05D1-013, W04D1-076, L05D1-018, L05D1-186, L05D1-017

(W) Baulk

Closed: End of season, bottom not reached

Matrix: The soil was light brown and sandy in most places with darker and more compact soil in the north. There was a large quantity of pottery sherds and bone, with a few roof tiles. Orange fresco was found and catalogued under basket 05D1-0235 along with a piece of glass slag which was catalogued under 05D1-0435.

Relations: L05D1-042 is a continuation of the British trench L04D1-133 from 2004.

L05D1-042 cut F05D1-013, W04D1-076, F04D1-177, floor makeup L05D1-018 and L05D1-186. L05D1-042 is probably contemporary with British trench L05D1-017 but cut possible robber trench L05D1-047.

L05D1-042 cut fragmentary floor F05D1-060 in the east. Beneath F05D1-060 and British trench L05D1-017, L05D1-042 cut fill L05D1-103, which is a strip between L05D1-042 and possible mudbrick wall W05D1-100.

L05D1-042 cut the three phantom floors in the western baulk: L05D1-125, L05D1-124 and L05D1-074, which have similar elevations to F05D1-177, F05D1-170 and F05D1-060.

In the north-east, L05D1-042 cut F05D1-064 below F05D1-013 along with W05D1-108 below, and a continuation of, W04D1-076.

Additional Observations/Value:

L05D1-042 is low value: British trench.

summary: _____

Opened: Opened as a possible robber trench of L04D1-186.

Limits(N) W04D1-076, L05D1-036

(S) L04D1-186

(E) L05D1-040

(W) L05D1-042

Closed: L05D1-047 came down on fill similar to L05D1-040 in matrix and elevation and collapsed with L05D1-040 and L05D1-056 into L05D1-060.

Matrix: Compasc, dark brown soil with a large number of field stones. The soil was similar to mud brick material in many area between the rocks, with many pieces of cement and wall plaster also thrown in. In a couple of areas, there were some small patches of grey flooring, possible from F04D1-170, but is is unclear. Pottery sherds, shells and a few tesserae and architectural fragments were also present.

Relations: L05D1-047 is cut by W05D1-76 and robber trench L05D1-036 in the north. L05D1-047 is cut by British trench L05D1-042 in the west.

L05D1-047 came down on fill similar in matrix and elevation as fill L05D1-060, which is under L05D1-040, thus L05D1-047 and L05D1-056 collapsed along with L05D1-040 into fill L05D1-060.

L05D1-018, which partially covered L05D1-047 may be disturbed by the robber trench L05D1-047.

Additional Observations/Value:

L05D1-047 is a possible robber trench of phase 2 wall or pavement L04D1-186 and is unsealed by the poor quality floor F04D1-177.

summary: _____

Opened:	Opened to remove eastern portion of F05D1-060.
Limits(N)	Baulk
(S)	L05D1-085
(E)	L05D1-087
(W)	L05D1-106, L05D1-088, L05D1-017
Closed:	When floor makeup was removed.
Matrix:	L05D1-086 contained loose soil and a large quantity of shells and pottery in the northern area that was covered by robber trench L05D1-036. This area's pottery and bone were catalogued under baskets 05D1-0609 and 05D1-0610. In the south, the majority of the locus contained more compact, dense and dark soil with pottery, bone and a smaller quantity of shells. A Herodian lamp fragment was found in the center and catalogued in basket 05D1-0613.
Relations:	<p>L05D1-086 is the floor makeup of fragmentary F05D1-060 in the east. Floor makeup L05D1-086 is probably the same deposit as floor makeup L05D1-088 because they have similar matrices. Floor makeup L05D1-086 extended north below the robber trench L05D1-036 of W05D1-076. L05D1-086 is the same floor makeup as L05D1-085 but is technically separated because of the British trench L05D1-017.</p> <p>L05D1-086 is cut by fill L05D1-106 in the north- east, and British trench L05D1-017 in the south.</p> <p>L05D1-086 is also cut by the foundation trench L05D1-087 of W05D1-034. F05D1-060 did not appear to reach W05D1-034 because the foundation trench L05D1-087 was above the F05D1-060 and L05D1-086 levels. For relations of F05D1-060 and W05D1-034 see locus card L05D1-060.</p>

Additional Observations/Value:
L05D1-086 is unsealed but good quality material below F05D1-060.

(E)	L05D1-040
(W)	L05D1-042
Closed:	L05D1-056 came down on floor makeup L05D1-060.
Matrix:	When L04D1-186 was removed, there was a large amount of ashy soil and sediments along with a small piece of blown glass under the north-eastern rock. The Weizmann Institute collected samples in baskets 05D1-0354 through 05D1-0357, under which the Weizmann baskets are listed as WIS 05D1-148 through WIS 05D1-151. Basket 05D1-0365 is a bucket of soil wet sifted with 1 mm. mesh. The results of the samples show high concentrations of lead which was fired at very high temperatures. Small quantities of glass slag were also found in the area.
Relations:	<p>L05D1-056 is sealed by L04D1-186.</p> <p>L05D1-056 is cut by British trench trench L05D1-042 in the west and possible robber trench L05D1-047 in the north.</p> <p>L05D1-056 and L05D1-047 both came down on fill similar in matrix and elevation to L05D1-040 and therefore L05D1-047, L05D1-056 and L05D1-040 all came down on fill L05D1-060.</p>

summary: _____

Opened: opened L05D1-033 to remove floor makeup of F05D1-023.

Limits(N) L05D1-017

(S) AR/15

(E) L04D1-170

(W) L05D1-017

Closed: Came down on continuation of F04D1-170.

Matrix: L05D1-033 contained five layers of floor makeup, alternating between lighter grey and an ashy darker grey. There was some pottery and shell and only a little bone. For each layer, the pottery and shells were divided into separate baskets as follows: 05D1-0159 contains pottery from first layer, 05D1-0170 contains pottery from second layer, 05D1-0172 contains pottery from third layer, 05D1-0187 contains pottery from fourth layer, 05D1-0188 contains bone from the fourth layer, 05D1-0199 contains pottery from the fifth layer and 05D1-0200 contains shells from the fifth layer.

Relations: L05D1-033 is cut by British trench L05D1-017.
L05D1-033 seals L05D1-049, which is the floor makeup of F04D1-170 South of British trench.

Additional Observations/Value:

Sealed floor makeup.

summary: _____

Opened: To excavate floor makeup of F05D1-033.

Limits(N) L05D1-017

(S) AR 15

(E) L05D1-040

(W) L05D1-017

Closed: Removed floor makeup.

Matrix: The floor makeup consisted mainly of shells with some bone and pottery sherds. The soil was loose and light brown with a few patches of ash and concrete.

Relations: L05D1-049 is cut by British trench L05D1-017.

F05D1-033 is probably the same floor of F04D1-170, which was kept separate because of the intervening British trench L05D1-017.

L05D1-049 continued into AR/15.

Additional Observations/Value:

L05D1-049 was sealed floor makeup of F05D1-033. The pottery sherds, shells and bones were assigned different baskets from L05D1-040 even though it is the same floor makeup; see locus card for L04D1-170. High value.

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened:	L05D1-088 opened to remove F05D1-060.
Limits(N)	L05D1-106, W05D1-108
(S)	L05D1-017
(E)	L05D1-086
(W)	L05D1-042
Closed:	Floor makeup was removed and came down on possible mud brick wall W05D1-100 in the west.
Matrix:	L05D1-088 contained a large amount of field stones and compact, dark brown soil in the west, but lighter and looser soil in the east. There was a large amount of pottery and bone throughout in addition to a couple of roof tiles, a small amount of plaster and some tesserae. A horse head lamp fragment was found and catalogued under basket number 05D1-0587. Samples of a rock with white, black and yellow material were given to the Weizmann Institute in 05D1-0585, WIS 05D1-254. The rock is of unknown material but contains iron and nickel with no lead or copper traces.
Relations:	L05D1-088 is cut by fill L05D1-106 and W05D1-108 in the north. It is also cut by British trenches L05D1-042 and L05D1-017 in the east and south. F05D1-060 was patchy and poor quality, making L05D1-088 unsealed. L05D1-088 is the same floor makeup deposit under F05D1-060 as floor makeup L05D1-086 in the east because it has the same matrix. L05D1-088 came down on a possible mud brick wall W05D1-100 and robber trenches L05D1-101 and L05D1-102 which were assigned north and south of the wall. L05D1-088 also came down on fill L05D1-105 and Fill L05D1-103 on the west side of W05D1-100.

Additional Observations/Value:

Since F05D1-060 was fragmentary, L05D1-088 is unsealed but still good context.

written by: LCC *checked by:* AE

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened: Opened as fill below L05D1-040 of F04D1-170, along with fill below L05D1-047 and L05D1-056.

Limits(N) W05D1-108, L05D1-106

(S) L05D1-017, L05D1-065

(E) L05D1-087, Baulk

(W) L05D1-042

Closed: Came down on fragmentary floor.

Matrix: L05D1-060 contained a large quantity of shells, pottery and bone similar to the floor makeup L05D1-040, even under the areas not covered by floor makeup L05D1-040. In the north-eastern region, there were patches of ash and a bronze coin was found and recorded in basket 05D1-0408. The soil was light brown and loose with fragmentary floor.

Relations: L05D1-060 is cut by British trenches L05D1-042 and L05D1-017 along with foundation trench L05D1-087. It is also cut by fill L05D1-106 and W05D1-108 in the north.

F05D1-060 was fragmentary and of poor quality. In the south-west region, the floor was more intact with the grey plaster surface, whereas in other regions, the floor was broken and contained darker subflooring material.

It is unclear if W05D1-034 cut F05D1-060 or if F05D1-060 reached the wall. There are two possibilities:

1) W05D1-034 and foundation trench L05D1-087 cut F05D1-060, making F05D1-060 possibly a phase 3 floor or a phase 2 floor with a later building installation cutting F05D1-060.

2) F05D1-060 reached W05D1-034 and due to erosion next to the wall and a slight sinking of the floor the relations of the F05D1-060 and W05D1-034 were lost. If this is the case, F05D1-060 and W05D1-034 are both probably phase 2.

Since F05D1-060 was fragmentary, the floor makeup below was separated into L05D1-088 in the middle and L05D1-086 in the east, yet the floor makeup loci have the same matrix. Floor makeup L05D1-086 extended north below the robber trench L05D1-036 of W05D1-076.

Additional Observations/Value:

summary: _____

Opened:	Opened when British trench L05D1-017 bottomed out and floor makeup L05D1-085 of F05D1-060 was removed. The material below floor makeup L05D1-085 was similar to the material below L05D1-017 and therefore collapsed as L05D1-104.
Limits(N)	L05D1-105
(S)	AR/15
(E)	L05D1-107
(W)	L05D1-102
Closed:	End of season.
Matrix:	Dark brown soil with a large quantity of field stones and pottery sherds, along with a few pieces of iron and some bone. The soil is denser and more compact than fill L05D1-105 to the north.
Relations:	L05D1-104 is cut by fill L05D1-105 and possible robber trench L05D1-102. L05D1-105 appears to be a later disturbance and may have mixed the ceramic assemblage in L05D1-104. It is unclear if L05D1-104 cuts fill L05D1-107 in the east.

Additional Observations/Value:
Low value: possibly disturbed.

summary: _____

Opened:	Opened as fill below floor makeup L05D1-049 of F05D1-033.
Limits(N)	L05D1-017
(S)	AR/15
(E)	L05D1-060
(W)	L05D1-017
Closed:	Came down on fragmentary floor.
Matrix:	L05D1-065 contained a large quantity of shells, pottery and bone similar to the floor makeup L05D1-049. The soil was loose and light brown but darker and more compact in the east. The floor is more complete in the east and still had the plaster floor layer which reached F05D1-060 in the north. In the west, L05D1-065 came down on more poor quality floor sections.
Relations:	L05D1-065 is cut by British trench L05D1-017 in the north and west. F05D1-065 is the same floor as F05D1-060 but is differentiated as the southern fragmentary floor cut by the British trench L05D1-017. Floor makeup L05D1-085 below is considered unsealed by F05D1-065 because of the poor quality of the floor.

Additional Observations/Value: Fill L05D1-065 is sealed by F05D1-033 and is considered high value.

summary: _____

Opened:	Opened when floor makeup L05D1-088 was removed.
Limits(N)	L05D1-106, W05D1-108
(S)	L05D1-104
(E)	L05D1-107
(W)	L05D1-101, W05D1-100, L05D1-102
Closed:	End of season.
Matrix:	L05D1-105 contained a large quantity of field stones as well as a large ashlar (0.94 m. x 0.41 m.) similar to those used in pseudo-atelaio construction. L05D1-105 also contained a large quantity of pottery and bone with some architectural fragments such as wall plaster and cement. An imitation painted attic lamp fragment, type 3, was found and catalogued under basket 05D1-0702. The soil was light brown and loose except in the west where the soil was dark brown and compact closer to possible mud brick wall W05D1-100.
Relations:	L05D1-105 is cut by a later fill L05D1-106 and W05D1-108 in the north. L05D1-105 is also cut by possible robber trenches L05D1-101 and L05D1-102. L05D1-105 cut fill L05D1-104 in the south and fill L05D1-107 in the east. Below L05D1-107, L05D1-105 is cut by possible fill or rodent burrow L05D1-128. Although L05D1-105 appears to be a late disturbance as suggested by the pottery assemblage, the nature and extent of the disturbance was not clearly defined.

Additional Observations/Value:
L05D1-105 is a disturbed fill and has a low value.

summary: _____

Opened:	Beginning of season to continue excavations of the robber trench of W04D1-076.
Limits(N)	Baulk
(S)	L05D1-015, L05D1-018
(E)	Baulk
(W)	W04D1-076, L05D1-013
Closed:	L05D1-014 came down on continuation of floor F05D1-013 in the North.
Matrix:	The area is filled with Kurkar rubble and fairly loose light brown soil with some pottery sherds, shells and a little bone. The North-Eastern region contains field stones which were considered to be originally part of W04D1-076 and were thrown or fell into the robber trench.
Relations:	L05D1-014 is the robber trench of W04D1-076 and cut L05D1-013, L05D1-015 and L05D1-018. It also cut F04D1-177 and F04D1-170. L05D1-014 partially covered floor F05D1-013 in the North. Below L05D1-014 robber trench of W05D1-076 continues as L05D1-036. The robber trench consists of L04D1-078, L05D1-014 and L05D1-035.

Additional Observations/Value:

L05D1-014 is part of robber trench for W04D1-076 and is disturbed.

Opened:	Opened to excavate floor makeup when F05D1-064 was removed.
Limits(N)	Baulk
(S)	W05D1-108
(E)	L05D1-036
(W)	L05D1-042
Closed:	Floor makeup was removed.
Matrix:	L05D1-089 contained a large quantity of field stones in light and loose soil. Closer to the wall, the soil was darker and contained material similar to a robber trench. L05D1-089 also contained pottery, bone and a large quantity of shells. A type 20 lamp fragment was found and catalogued under basket number 05D1-0835.
Relations:	L05D1-089 is unsealed by fragmentary floor F05D1-064 above. L05D1-089 is cut by W05D1-108 and robber trench L05D1-036. L05D1-089 is also cut by fill L05D1-106 below L05D1-036. In the east, L05D1-089 is cut by British trench L05D1-042.

Additional Observations/Value:
Medium value: unsealed floor makeup.

summary: _____

Opened:	Opened when floor makeup L05D1-088 was removed and a rectangular area of mudbrick appeared.
Limits(N)	L05D1-101
(S)	L05D1-102
(E)	L05D1-105
(W)	L05D1-103
Closed:	End of season, did not excavate and did not determine if W05D1-100 was or was not a wall.
Matrix:	Dark brown mud brick material appears to make a distinctive wall fragment compared to the surrounding loci. However, small field stones in L05D1-105 appear to extend under the mud brick material. Matrix of the locus is unknown because it was not excavated.
Relations:	W05D1-100 is possibly cut by robber trenches L05D1-101 and L05D1-102, although L05D1-101 and L05D1-102 were technical separations and may not be robber trenches. W05D1-100 is reached by fill L05D1-103 in the west and fill L05D1-105 in the east.

summary: _____

Opened:	Technical division so that the fill on both sides of W05D1-100 could be separated. Opened as possible robber trench for W05D1-100.
Limits(N)	W05D1-108
(S)	W05D1-100
(E)	L05D1-105
(W)	L05D1-103
Closed:	End of season, did not complete excavation.
Matrix:	L05D1-101 contained a very large quantity of field stones and pottery with a small amount of bone. The soil was compact but light brown with some dense, darker soil closer to W05D1-108 in the north. In the south, the dirt was looser around the eastern edges of the possible mudbrick wall W05D1-100. A bronze coin was found and catalogued under basket number 05D1-0874.
Relations:	L05D1-101 cuts W05D1-100, fill L05D1-103 in the west and fill L05D1-105 in the east, although L05D1-105 may be a late disturbance cutting L05D1-101, as pottery assemblage suggests. Possible robber trench L05D1-101 is cut by W05D1-108 in the north.

Additional Observations/Value:

L05D1-101 is below unsealed floor makeup L05D1-088 from fragmentary floor F05D1-060 and is considered unsealed; high value.

summary: _____

Opened: Removed as the floor makeup of F04D1-159.

Limits(N) L05D1-017

(S) AR/15

(E) L04D1-170

(W) L05D1-017

Closed: L05D1-023 came down on floor.

Matrix: The floor makeup was light grey and filled with some pottery sherds.

Relations: L05D1-023 is cut by British trench L05D1-017.

L05D1-023 covers and seals L05D1-033.

It is possible but unknown that F05D1-023 is the same as F04D1-177 which was above F04D1-170.

Additional Observations/Value:

L05D1-023 is sealed floor makeup below F04D1-159, High value.

summary: _____

Opened:	Opened as floor makeup of F05D1-065.
Limits(N)	L05D1-017, L05D1-086
(S)	AR/15
(E)	Baulk
(W)	L05D1-017
Closed:	Matrix changed below floor makeup and British trench L05D1-017 bottomed out.
Matrix:	Large quantity of shells and pottery in loose soil in the west. More compact and dense soil in the east along with pottery and shells. There were a few pockets of ash and charcoal found throughout the locus along with bone. Because the floor was fragmentary, the pottery, shells and bone were separated into different baskets. In the western area without flooring, the pottery was catalogued under 05D1-0573, the shells under 05D1-0575 and the bone under 05D1-0576. In the eastern area covered by a plaster floor, the pottery was catalogued under 05D1-0580, the shells under 05D1-0581 and the bone under 05D1-0584.
Relations:	<p>Floor makeup L05D1-085 was cut by L05D1-017 in the north and the west and but did not appear to continue into AR/15 in the south. In 2000, locus L26211, which was south of L05D1-085, was a pit that did not appear to have any floor makeup matrix.</p> <p>L05D1-085 is the same floor makeup as L05D1-086 and L05D1-088 because it has the same matrix and elevations, but is cut by the British trench. See locus card L05D1-065.</p>

Additional Observations/Value:

F05D1-065 was fragmentary and therefore L05D1-085 is unsealed but still high value.

summary: _____

Opened: Removed as floor makeup of F04D1-177. F04D1-177 was patchy and poor quality and therefore L05D1-018 is considered unsealed.

Limits(N) W04D1-076, L05D1-014
(S) W04D1-186, L04D1-170, L05D1-016
(E) L05D1-015
(W) L05D1-042

Closed: Came down on continuation of F05D1-170.

Matrix: Dark brown and light grey soil in the east and many field stones with compact, dark brown soil and pockets of ash in the west. L05D1-018 was filled with pottery sherds, shells, some bones and a few tesserae.

Relations: L05D1-018 came down on F04D1-170. The floor is good quality and seals fill L05D1-040 below.

L05D1-018 is cut by W04D1-076, L05D1-015, British trench L05D1-042 and robber trench L05D1-014. It is also partially cut by fill L05D1-016.

L05D1-018 came down on possible robber trench L05D1-047 in the east which cut F05D1-170 and the material of L05D1-018 is probably disturbed by this robber trench.

The relations between L05D1-018 and possible pavement L04D1-186 and possible robber trench L05D1-047 are unclear, but these are the possibilities:

- 1) L05D1-186 could be a wall, of which L05D1-047 is the robber trench, and the wall could have been built on the F04D1-170, then F04D1-177 might have reached the wall. But, when the wall was robbed, the F04D1-177 was detached, so that L05D1-018 contains part of the robber trench for wall.
- 2) L05D1-186 could be a paving built on top of F04D1-170 and is paving which F04D1-177 reached.
- 3) F05D1-170 could have reached possible wall L05D1-186 and which it was robbed the relation could have been disturbed.
- 4) Possible wall L05D1-186 could have cut both F04D1-177 and F04D1-170. L05D1-018 then

Locus Car

DOR 2005

L **05D1-018** 2005 *Area* D1 *Sq:* AR- /16- *Loc. type:* Floor makeup

contained part of the robber trench and is disturbed.

Additional Observations/Value:

Unsealed floor makeup of F04D1-177 and may be disturbed by robbing trench of W04D1-186.

summary: _____

Opened:	Beginning of season to continue excavation of the British trench.
Limits(N)	L04D1-186, L05D1-040
(S)	L05D1-023, AR/15
(E)	L05D1-040
(W)	L05D1-042
Closed:	British trench ended on L05D1-103, L05D1-102, L05D1-104, L05D1-105 and L05D1-107.
Matrix:	Dark and light brown loose soil with a small quantity of plaster. Some bone fragments found throughout the locus along with shells and pottery. A very small amount of ash was also found near F04D1-159 in the South. Some medium sized field stones were scattered in the soil in the west. Two iron nails, probably British, were found in L05D1-017 but were not recorded in baskets.
Relations:	<p>L05D1-017 is the continuation of L04D1-135 from 2004.</p> <p>L04D1-017 cuts F04D1-170, its sealed floor makeup L05D1-040. Below, L05D1-017 cuts sealed fill below floor makeup L05D1-060 and its unsealed floor makeup L05D1-088 in the north and east.</p> <p>In the south L05D1-017 also cuts F04D1-135, sealed floor makeup F05D1-023, sealed floor makeup F05D1-033 and sealed floor makeup L05D1-065. F04D1-170 is the same floor as F05D1-033 because they meet in the east, but are given separated loci because they are cut by L05D1-017. Likewise, F05D1-060 is probably the same floor as L05D1-065 because they are at the same elevations, the matrices are the same and the fragments reach in the east, but they were given separate loci because L05D1-017 cuts them.</p> <p>L04D1-017 is cut by western British trench L05D1-042 but is probably contemporary with it.</p> <p>L05D1-017 cuts pavement L04D1-186 in the north-west. L05D1-017 comes down on , L05D1-103, L05D1-102, L05D1-105, L05D1-104 and L05D1-107</p>

Additional Observations/Value:

L05D1-105 and L05D1-107 are also below British trench L05D1-017. L05D1-017 is disturbed and low value.

summary: _____

Opened:	Opened to excavated the foundation trench of W05D1-034.
Limits(N)	Baulk
(S)	L05D1-086
(E)	W05D1-034, Baulk
(W)	L05D1-086
Closed:	Came down on a row of field stones.
Matrix:	L05D1-087 contained dark, hard soil filled with many field stones, pottery and bone. A small amount of plaster and cement were also present along with a Persian ceramic foot of a standing figure which was catalogued under basket number 05D1-0772.
Relations:	<p>L05D1-087 is the foundation trench of W05D1-034.</p> <p>The relations between F05D1-060 and W05D1-087 are mostly dependent upon foundation trench L05D1-087. Yet, it is unclear if W05D1-034 cut F05D1-060 or if F05D1-060 reached the wall. There are two possibilities:</p> <ol style="list-style-type: none"> 1) W05D1-034 and foundation trench L05D1-087 cut F05D1-060, making F05D1-060 an earlier floor with a later building cutting F05D1-060. 2) F05D1-060 reached W05D1-034 and due to erosion next to the wall and a slight sinking of the floor, the relations of the F05D1-060 and W05D1-034 were lost. If this is the case, F05D1-060 and W05D1-034 are contemporaneous. <p>Below L05D1-086, L05D1-107 is cut by L05D1-087 in the east and south.</p>

Additional Observations/Value:

High value: foundation trench.

summary: _____

Opened:	Opened when L05D1-091 (unsealed fill) came down on the top course of W05D1-110.
Limits(N)	L05D1-099 (kiln fill).
(S)	W05D1-081 (S. kiln wall).
(E)	W26127.
(W)	L05D1-099 (kiln fill).
Closed:	Not removed. End of season.
Matrix:	Four courses of field stones with worked faces still extant in southern stretch, with one and perhaps a second additional course perched above them on the eastern edge, resting against W26127. The courses peter out one by one as they progress north. The entire wall tilts outwards (to the east) ~5 degrees from the vertical (a feature shared with the other kiln walls, W05D1-109 and W05D1-081). The regularity of the construction is similar to that of W05D1-109 (W. kiln wall); both are quite different from the haphazard appearance of W05D1-081 (S. kiln wall). Some of the stones were cracked and displayed red and yellow discoloration (most obvious in the top course): clear signs of exposure to high heat.
Relations:	<p>LOCI RELATIONS:</p> <p>L05D1-091 (unsealed fill) came down on the top course of W05D1-110. L05D1-111 (unsealed fill) came down on the second and lower courses, showing that the eastern wall of the kiln extended further north than previously thought.</p> <p>In the north and west, W05D1-110 was reached by a succession of kiln fill and kiln-related loci: L05D1-099, L05D1-111 and L05D1-112, L05D1-114, and L05D1-117 and L05D1-118.</p> <p>In the north-east, W05D1-110 was reached by L05D1-115 (unsealed fill).</p> <p>FLOOR RELATIONS:</p> <p>F05D1-117 (the 'firebox' of the kiln) reaches both W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall), although it does not seem to reach W05D1-081 (S. kiln wall).</p> <p>WALL RELATIONS:</p> <p>Both W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall) abut W05D1-081 (S. kiln wall). Since the three together currently form a single feature, one might assume that they were built contemporaneously. However, although it is not certain, it seems likely that the pile of stones in the middle of L05D1-083 (robber trench of Stage B of W16150) constitutes an east-west extension of W05D1-109 (W. kiln wall). If so, it would mean that W05D1-109 cuts Stage B of</p>

Locus Car

DOR 2005

Eastern Kiln Wall

W **05D1-110** 2005 *Area D1 Sq: AS- /14-15 Loc. type:*

W16150 in the north. This in turn would fit the hypothesis that W05D1-081 (southern kiln wall), W16150 on the west, and W26127 on the east together constituted an earlier stage of the kiln, which was subsequently modified (and narrowed) by the addition of W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall). This might also explain why W05D1-109 and W05D1-110 both abut W05D1-081--and why they share construction techniques relatively similar to each other, but quite different from that of W05D1-081.

The southern stretch of W05D1-110 is built against W26127; the northern stretch separates from W26127 in a gentle S-curve, creating a small cavity between them (designated L05D1-115).

*** ADDITIONAL PHOTOS: p05D1-9071, p05D1-9072, p05D1-9073.

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened:	Opened to remove floor makeup (unsealed) of F05D1-032.
Limits(N)	N Baulk.
(S)	Material previously excavated in Square AS-14 (1995-2000).
(E)	Material previously excavated in Square AR-15 (2000).
(W)	W16127; L05D1-026.
Closed:	Closed when floor makeup gave way to fill below (L05D1-055).
Matrix:	Ashen-beige dirt, slightly sandy in texture, with many pebbles, fist-sized chunks of concrete, and the occasional isolated cobblestone, but little pottery (and almost no diagnostics). Copious chunks of wall plaster came up, especially in the southern, more rubblely, half of the locus (in this, just like L05D1-032 above). The matrix of that central part of L05D1-054 underneath the still-plastered part of F05D1-032 above was identical in composition to the rest of L05D1-054.
Relations:	L05D1-054 occupies the eastern half of square. L05D1-054 is not sealed by F05D1-032 above because of the fragmentary nature of the floor. Excavation of L05D1-054 along the wall confirmed that it did indeed reach W16127, as the small stones and chunks of concrete matrix extend under the lip of the topmost, bevelled, course to reach its receding underbelly, packed into the crack. (Notably, what little diagnostic sherds the locus yielded came from the floor makeup in this crack.) L05D1-054 is cut by L05D1-026 (sand pit) in the NW.

Additional Observations/Value:

Medium Value: Unsealed floor makeup of earliest Phase 1 floor.

Images:	Image Number	
	d05D1-1606

summary: _____

Opened:	Opened to remove the unsealed floor makeup of F05D1-063.
Limits(N)	L05D1-069; L05D1-070.
(S)	W05D1-093.
(E)	Material previously excavated in Square AR-15 (2000).
(W)	W16150.
Closed:	Closed when came down on Stage B of W16150 (Nike wall), as well as a threshold stone in center of locus (recognized as the possible top course of W26204: see below).
Matrix:	Brown dirt, with field-stone rubble concentrated in south (along northern face of W05D1-093) and west, and several chunks of burnt clay (~3 cm. by 5 cm.) in south against W05D1-093.
Relations:	<p>L05D1-071 is a rectangular locus in the south-east part of the square, between W16150 (Nike wall) and W05D1-093. Opened as the unsealed floor makeup beneath the southern, fragmentary half of F05D1-063. (L05D1-069 to the north represents the sealed floor makeup beneath the northern, intact half of F05D1-063.)</p> <p>L05D1-082 represents the continuation below of L05D1-071 east of Stage B of W16150 (Nike wall).</p> <p>The threshold stone on which L05D1-071 came down was originally assumed to be in secondary use, and taken as constituting the highest stone in the top course of W26204. Excavation of L05D1-082, however, revealed that the threshold stone actually sits alone atop a continuous course of W26204 below. It is thus unclear as to whether the threshold stone is actually the sole remaining stone of the top course of W26204 (in which case L05D1-071 was the first locus to come down on W26204), or whether it was cast in as part of the fill above W26204 and simply happens to be in line with it (in which case the course on which it rests is the top course of W26204, and L05D1-082 was the first to come down on W26204). The genealogy shows both loci as coming down on W26204.</p>

Additional Observations/Value:

Medium Value: unsealed floor makeup locus with no clear architectural relations.

summary: _____

Opened: Opened when L05D1-055 (unsealed fill below floor makeup of F05D1-032) came down on the top course (both Stage A and B) of Nike wall W16150. (For fuller discussion of the staging of the Nike wall, see the card for W16150.)

Limits(N) N Baulk.

(S) Material previously excavated in Square AS-14 (1995-2000).

(E) Material previously excavated in Square AR-15 (2000).

(W) L05D1-062; W16150.

Closed: Closed when came down on F05D1-063 and W05D1-093.

Matrix: Ashen-beige dirt with many pebbles and several chunks of worked limestone scattered throughout, and numerous large body sherds along the eastern edge. F05D1-063 is a crushed kurkar floor with a slight yellowish cast (redder in the very north); it is intact in the north and center, fragmented in the south. Though technically unsealed, L05D1-063 presents a good context.

Relations: LOCI BELOW (cont.): W05D1-093.

L05D1-063 occupies the half of square east of W16150.

L05D1-063 and F05D1-063 are cut by L05D1-062 (robber trench of Stage A of Nike wall W16150) in the west.

F05D1-063 is too fragmentary in the south to say that it reaches either W05D1-093 (though it could have), or Nike wall W16150 (though it could have reached both Stage A and B).

F05D1-063 seals L05D1-069 (floor makeup) and L05D1-075 (fill below), as well as W05D1-081 (S. kiln wall beneath L05D1-075).

*** ADDITIONAL PHOTOS: p05D1-9061, p05D1-9062.

Additional Observations/Value:

Medium Value: technically unsealed floor with no clear architectural relations.

summary: _____

Opened:	Opened when L05D1-091 (unsealed fill) came down on top course of W05D1-109.
Limits(N)	L05D1-099 (kiln fill).
(S)	W05D1-081 (S. kiln wall).
(E)	L05D1-099 (kiln fill).
(W)	L05D1-083 (robber trench of Stage B of W16150).
Closed:	Not removed. End of season.
Matrix:	Comprised of five clear courses, though construction in the middle of the wall differs from that on the ends: the middle stretch of each course is constructed of field stones, not obviously worked; these are flanked on each side by much larger squared stones, resembling miniature ashlar, which anchor the courses at both northern and southern ends. The entire wall tilts outwards (to the west) ~5 degrees from the vertical (a feature shared with the other kiln walls, W05D1-081 and W05D1-110). The regularity of the construction is similar to that of W05D1-110 (E. kiln wall); both are quite different from the haphazard appearance of W05D1-081 (S. kiln wall). Some of the stones were cracked and displayed red and yellow discoloration: clear signs of exposure to high heat. Note: the Weizmann Institute took several samples from the area of the kiln installation, including one from this locus: WIS307.

Relations:	<p>LOCI RELATIONS: In the north and east, W05D1-109 was reached by a rapid succession of kiln fill and kiln-related loci: L05D1-099, L05D1-111 and L05D1-112, L05D1-114, and L05D1-117 and L05D1-118.</p> <p>FLOOR RELATIONS: F05D1-117 (the 'firebox' of the kiln) reaches both W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall), although it does not seem to reach W05D1-081 (S. kiln wall).</p> <p>WALL RELATIONS: Both W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall) abut W05D1-081 (S. kiln wall). Since the three together currently form a single feature, one might assume that they were built contemporaneously. However, although it is not certain, it seems likely that the pile of stones in the middle of L05D1-083 (robber trench of Stage B of W16150) constitutes an east-west extension of W05D1-109 (W. kiln wall). If so, it would mean that W05D1-109 cuts Stage B of W16150 in the north. This in turn would fit the hypothesis that W05D1-081 (southern kiln wall), W16150 on the west, and W26127 on the east together constituted an earlier stage of the kiln, which was subsequently modified (and narrowed) by the addition of W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall). This might also explain why W05D1-109 and</p>

summary: _____

Opened: The eastern end of W05D1-093, in square AR-15, had been previously exposed during the 2000 season and numbered as W26204 (for fuller discussion, see Relations below). Re-opened this season when L05D1-063 came down on top course of W05D1-093.

Limits(N) L05D1-071; see also card from 2000.

(S) Material previously excavated in Square AS-14 (1995-2000); W16650.

(E) Material previously excavated in Square AR-15; see card from 2000.

(W) W16150 (Nike wall).

Closed: Not removed. End of season.

Matrix: L: 2.10 m. Max W: 0.65 m. H: 1.15 m (measured at cut eastern end in square AR-15). Note that wall appears to continue further downward into unexcavated dirt in square AR-15 (see sketch). Constructed of unworked field stones and some large field stones with worked faces. At least three courses visible from the south, two more further below visible from the cut eastern end in square AR-15.

Relations: The adjacent eastern ends of W05D1-093 and W26204 were both exposed in square AR-15 during the 2000 season. At that time they were held to be a single wall, and given the number W26204. When excavation during this 2005 season revealed them to be two separate walls, parallel and built against each other, it became necessary to assign them different numbers. The northern of the two walls was allowed to keep the original designation as W26204; the southern was given the new number W05D1-093.

LOCI and FLOOR RELATIONS:

The southern part of L05D1-063 (unsealed fill) covers but does not seal W05D1-093.

Although F05D1-063 is intact in the north, it is so fragmentary in the south that it is impossible to tell whether it does or does not reach W05D1-093--although it certainly could have.

Unsealed fill loci L05D1-071 and L05D1-082 below both reach W05D1-093 in the north.

WALL RELATIONS:

W05D1-093 abuts both Stage A and B of W16150 (Nike wall).

Third course of W05D1-093 covers the northern edge of W16650's top course in square AS-14.

W05D1-093 and W26204 are built against each other. (W26204 is more likely older,

since--unlike W05D1-093--it only abuts Stage B of Nike wall W16150. In addition, the fact that W05D1-093 covers W16650's top course suggests it is a relatively late wall.)

summary: _____

Opened: Opened when L05D1-075 (sealed fill below floor makeup) came down on the top course of W05D1-081.

- Limits(N)** L05D1-079 (unsealed fill).
(S) L05D1-082 (unsealed fill).
(E) L05D1-080 (unsealed fill).
(W) W16150 (Nike wall).

Closed: Not removed. End of season.

Matrix: W05D1-081 is of very irregular construction: a mixture of ashlar stretchers, smaller squared stones, and field stones laid in no clearly discernible order: courses jog, ashlar don't align, etc. The entire wall tilts outwards (to the south) ~7 degrees from the vertical (a feature shared with the other kiln walls, W05D1-109 and W05D1-110). This 'funnel' formation means that while the top course of W05D1-081 is 1.55 m long, the bottom course (either course 3 or 4, depending on how one wants to impose order to the stones) is only 1.10 m long. Most of the stones were cracked and displayed red and yellow discoloration (especially the top course): clear signs of exposure to high heat. Note: the Weizmann Institute took several samples from the area of the kiln installation, including seven from this locus: WIS285, WIS287, and WIS294-298.

Relations:

LOCI RELATIONS:
L05D1-075 (sealed fill below floor makeup of F05D1-063) came down on the top course of W05D1-081, and seals it. L05D1-080 (unsealed fill) came down on the second course in the east.

In the north, unsealed fill loci L05D1-079 and then L05D1-091 below reached W05D1-081. Below that, W05D1-081 was reached by a rapid succession of kiln fill loci: L05D1-099, L05D1-112, L05D1-114, and L05D1-117.

In the south, unsealed fill loci L05D1-082 and then L05D1-092 below reached W05D1-081.

FLOOR RELATIONS:
While F05D1-117 (the 'firebox' of the kiln) reaches both W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall), it does not currently reach W05D1-081 (S. kiln wall).

WALL RELATIONS:
W05D1-081 is built against Stage B of W16150.

Locus Car

DOR 2005

W 05D1-081 2005 Area D1 Sq: AS- /14-15 Loc. type: South Kiln Wall

Both W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall) abut W05D1-081 (S. kiln wall).

Since the three together currently form a single feature, one might assume that they were built contemporaneously. However, although it is not certain, it seems likely that the pile of stones in the middle of L05D1-083 (robber trench of Stage B of W16150) constitutes an east-west extension of W05D1-109 (W. kiln wall). If so, it would mean that W05D1-109 cuts Stage B of W16150 in the north. This in turn would fit the hypothesis that W05D1-081 (southern kiln wall), W16150 on the west, and W26127 on the east together constituted an earlier stage of the kiln, which was subsequently modified (and narrowed) by the addition of W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall). This might also explain why W05D1-109 and W05D1-110 both abut W05D1-081--and why they share construction techniques relatively similar to each other, but quite different from that of W05D1-081.

summary: _____

Opened: Opened when L05D1-082 (unsealed fill) came down on a continuous course of W26204 (which may or may not have been its top course: see card for L05D1-082).

- Limits(N)** W05D1-081 (S. kiln wall).
- (S) W26204.
- (E) Material previously excavated in Square AR-15 (2000).
- (W) W16150 (Nike wall).

Closed: Not finished excavating. End of season.

Matrix: Light brown dirt, with many bits of bone concentrated in the east. A white, chalky chunk of rock was found in the very north, nestled against W05D1-081 (S. kiln wall): probably a piece of limestone calcified from the heat of the adjacent kiln.

Relations: L05D1-092 is a long and narrow, roughly rectangular locus bounded on north, west, and south by walls.

L05D1-092 represents the continuation below of L05D1-082 (unsealed fill) north of W26204.

Additional Observations/Value:

Low Value: unsealed fill.

summary: _____

Opened: Opened as strip of unsealed fill between W16127 and W16150 (Nike wall) when L05D1-055 came down on Stage A of W16150.

- Limits(N)** L05D1-062.
- (S) Material previously excavated in Square AS-14 (1995-2000).
 - (E) L05D1-062; W16150 (Stage A).
 - (W) W16127 (Stage B).

Closed: Closed when adjacent L05D1-062 (robber trench of Stage A of Nike wall W16150) came down on Stage B of W16150 and L05D1-083 (robber trench of Stage B of W16150).

Matrix: Medium-brown soil--darker and loamier than that of adjacent robber trench L05D1-062--with many fragments of bone, fragments of burnt ceramic (perhaps from kiln?), and several bits of charcoal. Denser in south.

Relations: L05D1-061 is a long sliver of fill separating W16127 to the west from W16150 (Nike wall) to the east.

Although no foundation trench was visible for W16127, L05D1-061 was nonetheless excavated in two stages: a thin strip, ~5 cm. wide, was excavated along W16127 and basketed separately as possible foundation trench (basket #'s 05D1-0374, 05D1-0377, and 05D1-0381 for pottery, glass, and bone); the remainder of the locus was then excavated.

L05D1-061 is cut by L05D1-062 (robber trench of Stage A of Nike wall W16150) in the north-east.

L05D1-078 under L05D1-061 was opened as the downward continuation of L05D1-061, and displays the same matrix.

*** ADDITIONAL PHOTOS: p05D1-9060, p05D1-9061, p05D1-9062.

Additional Observations/Value:

Low Value: unsealed fill with no remarkable contents.

summary: _____

Opened: Opened to collapse L05D1-111 and L05D1-112 when matrices of L05D1-111 and L05D1-112 appeared identical, and L05D1-111 came down on second course of W05D1-110 (E. kiln wall). Since the second course of W05D1-110 continues well beyond the truncated upper course, extending 0.65 m. further north, it was taken as evidence that the kiln interior actually extended further north than previously thought, encompassing most of L05D1-111 as well as L05D1-112.

- Limits(N)** N Baulk.
- (S)** W05D1-081.
- (E)** L05D1-115; W05D1-110.
- (W)** L05D1-083; W05D1-109.

Closed: Closed when came down on east-west ridge of burnt ceramic material spanning W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall), clearly dividing the area of the kiln installation into northern and southern parts.

Matrix: Matrix identical to that of L05D1-099, L05D1-111, and L05D1-112 above: very dense matrix of brown dirt with large chunks of burnt clay and pottery, pellets of burnt kurkar, bits of charcoal and sulphur-yellow powdery material, fragments of burnt bone, small lumps of (bronze?) slag, and the occasional piece of glass, including glass slag bonded to ceramic. Large chunks of burnt kurkar are especially concentrated in the south-west, in the corner of W05D1-081 and W05D1-109. Low pottery content, although finds included a large fragment of a large, late Attic vessel (basket # 05D1-0793). The entire locus was dry-sifted with 1-cm. screens, and all contents except pottery given to the Weizmann Institute.

Relations: L05D1-114 is a roughly rectangular locus which includes the ovoid kiln pocket delimited by W05D1-109 (W. kiln wall), W05D1-081 (S. kiln wall), and W05D1-110 (E. kiln wall), to the northern baulk.

L05D1-114 is cut by L05D1-083 (robber trench of Nike wall W16150) in the west.

The east-west ridge of burnt ceramic material spanning W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall) clearly divides the area of the kiln installation into a northern, "outer" area (continued below as L05D1-118) and a southern, "inner" area (continued below as L05D1-117). This dividing line runs parallel to--and only 5 cm. to the south of--the line drawn earlier to separate L05D1-111 and L05D1-112 above. This confirms that we were indeed right to differentiate between the fill "inside" the kiln (L05D1-112) and the fill "outside" it (L05D1-111) earlier, even if we subsequently abandoned the attempt and collapsed them into L05D1-114.

summary: _____

Opened:	When L05D1-114 came down on an east-west ridge of burnt ceramic material spanning W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall), clearly dividing the area of the kiln installation into northern ("outer") and southern ("inner") parts, L05D1-117 was opened to excavate the southern part.
Limits(N)	L05D1-118 (unsealed fill).
(S)	W05D1-081 (S. kiln wall).
(E)	W05D1-110 (E. kiln wall).
(W)	W05D1-109 (W. kiln wall).
Closed:	Not removed. End of season.
Matrix:	Matrix identical to that of the other kiln-related fill loci (L05D1-099, L05D1-111, L05D1-112, and L05D1-114 above, L05D1-118 adjacent): very dense matrix of brown dirt with large chunks of burnt clay and pottery, pellets of burnt kurkar, bits of charcoal and sulphur-yellow powdery material, fragments of burnt bone, small lumps of (bronze?) slag, and the occasional piece of glass. Also produced a marble mosaic tessera. Low pottery content. The entire locus was dry-sifted with 1-cm. screens, and all contents except pottery given to the Weizmann Institute. Note: the Weizmann Institute took several samples from the area of the kiln installation, including thirteen from this locus and its floor: WIS286, WIS288-293, WIS299-302, WIS306, and WIS313. ***** F05D1-117 (the firebox floor of the kiln installation) is made of a thick (~8 cm) layer of ceramic material, charred black on the upper surface, yellow in the middle, and red on the bottom. The entire floor curves upwards at the north, presenting a steeply raised lip; that it also did so in the south, producing a "basin" shape, is indicated by a small patch of still-extant flooring in the south-east, where the ceramic material curves upwards in both directions and clearly delineates a south-eastern "corner" of the firebox. The firebox floor basin is sharply separated into western and eastern halves by a north-south ridge of similar ceramic material whose upward extension has clearly been razed. Two distinct parallel lines of red material delineate some kind of core to the north-south ridge; these are probably the two sides of a ceramic pipe or tube embedded in the firebox floor (most likely to carry air), and may constitute part of the kiln's flue. It is not clear whether the central ridge of ceramic material in which the pipe is embedded extended only a bit further upwards, just enough to cover and protect the pipe (in which case, the two halves of the firebox floor were separated only by a small hump carrying the flue), or whether the ridge extended much further upwards as an internal wall, creating two separate firebox chambers. Note: the Weizmann Institute took several samples of the floor; numbers are given above.

Locus Car

DOR 2005

L **05D1-117** 2005 Area D1 Sq: AS- /14-15 Loc. type: Kiln Fill

Relations:

LOCUS RELATIONS:

L05D1-117 constitutes the ovoid pocket delimited by the three kiln walls (W05D1-109, W05D1-081, and W05D1-110). It represents the continuation below of that part of kiln fill L05D1-114 "inside" the kiln, and is separated from L05D1-118 (the continuation below of that part of L05D1-114 "outside" the kiln to the north) by the raised northern lip of its own burnt ceramic floor.

FLOOR RELATIONS:

F05D1-117 reaches W05D1-109 (W. kiln wall) in the north-west.

F05D1-117 reaches W05D1-110 (E. kiln wall) in the south-east.

F05D1-117 does not reach W05D1-081 (S. kiln wall) in the south. It may have been cut--but the fact that the bit of remaining floor material reaching W05D1-110 in the south-east curves upwards in both directions would seem to indicate that it marks the southern extent of the firebox floor basin. It thus seems more likely that a gap of ~20 cm was purposefully left between the (floor of the) firebox and the southern kiln wall--perhaps in order to increase circulation of air inside the firebox and through the pipe?

*** ADDITIONAL PHOTOS: p05D1-9071, p05D1-9072, p05D1-9073.

Additional Observations/Value:

High Value (for the fill): kiln fill. Highest Value (for the floor): kiln firebox ceramic floor.

summary: _____

Opened: When L05D1-114 came down on an east-west ridge of burnt ceramic material spanning W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall), clearly dividing the area of the kiln installation into northern ("outer") and southern ("inner") parts, L05D1-118 was opened to excavate the northern part.

- Limits(N)** N Baulk.
- (S)** L05D1-117 (kiln fill).
- (E)** L05D1-115 (unsealed fill); W05D1-110 (E. kiln wall).
- (W)** L05D1-083 (robber trench of Stage B of Nike wall W16150).

Closed: Not excavated entirely. End of season.

Matrix: Matrix identical to that of the other kiln-related fill loci (L05D1-099, L05D1-111, L05D1-112, and L05D1-114 above, L05D1-115 and L05D1-117 adjacent): very dense matrix of brown dirt with large chunks of burnt clay and pottery, pellets of burnt kurkar, bits of charcoal and sulphur-yellow powdery material, fragments of burnt bone, small lumps of (bronze?) slag, and the occasional piece of glass, including glass slag bonded to ceramic. Low pottery content. The entire locus was dry-sifted with 1-cm. screens, and all contents except pottery given to the Weizmann Institute. Note: the Weizmann Institute took several samples from the area of the kiln installation, including five from this locus: WIS308-312.

Relations: L05D1-118 is a roughly rectangular locus in the very north of the square. It stretches from L05D1-083 (robber trench of Nike wall W16150) in the west to L05D1-115 (unsealed fill) in the east along the northern baulk, and reaches (but is not contained within) kiln walls W05D1-109 and W05D1-110 in the south-west and south-east respectively.

L05D1-118 represents the continuation below of that part of L05D1-114 north of the east-west ridge of burnt ceramic material spanning W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall). It was thus conceived at opening to be the area "outside" the kiln proper (even if most likely still within the kiln building). This assumption was confirmed when excavation of adjacent L05D1-117 (the continuation below of that part of L05D1-114 south of the east-west ridge of burnt ceramic material) showed that the ridge was actually the raised lip of the kiln's firebox floor. (For fuller discussion of the floor, see the card for L05D1-117.)

Additional Observations/Value:

Medium Value: fill associated with the kiln installation.

summary: _____

Opened: When L05D1-062 (robber trench of Stage A of Nike wall W16150) came down on Stage B of W16150, L05D1-083 was opened as the robber trench of the northward extension of Stage B.

- Limits(N)** N Baulk.
- (S) W16150 (Nike wall).
- (E) L05D1-079 (unsealed fill).
- (W) L05D1-078 (unsealed fill); W16150.

Closed: Not finished excavating. End of season.

Matrix: Light brown dirt with almost no pebbles. Many bits of bone concentrated in the south. Sand in very north probably continues the sand first encountered just below topsoil, in L05D1-026 (sand pit). Contents also included bits of sulfur, burnt kurkar, burnt pottery, and burnt clay, as well as a piece of black glass slag (~3 by 2 cm). Since the frequency of burnt materials increased as we excavated downward, we assume they are probably kiln-related. At the lower levels of the locus in the north, and between the rocks emerging in the center, the matrix and materials excavated were indistinguishable from that of the kiln fill loci directly adjacent (L05D1-099, L05D1-111, L05D1-114, L05D1-118), including not only heat-altered sediment, pottery, and kurkar, but also (bronze?) slag and glass slag bonded to ceramic. Final evidence of proximity to the kiln came from the (now fully exposed) pile of stones in the center of the trench, where cracked pieces of three ceramic tubes were unearthed amidst the rocks. Resembling small drain pipes, these tubes might be construed as air pipes for or from the neighboring kiln, except that each is sealed at one end. Whether they are in situ or not is unclear. It has been suggested that they might have been used to cast glass ingots. Two of them (basket #'s 05D1-0897 and 05D1-0898) were removed and given to the Weizmann Institute; the third (basket # 05D1-0899) was left in situ for next season's consideration. Note: the Weizmann Institute took several samples from the area of the kiln installation, including two from this locus: WIS303 and WIS304.

Locus Car

DOR 2005

L 05D1-083 2005 Area D1 Sq: AS- /14-15 Loc. type: Robber Trench

Relations: Note: because the pile of stones left standing in the middle of L05D1-083 separates the robber trench into northern and southern stretches, closing high and low elevations were taken for all three sections:

Northern stretch: 14.58 / 14.50
Central stones: 15.22 / 14.76
Southern stretch: 14.91 / 14.88

LOCI RELATIONS:

To the west, L05D1-083 cuts L05D1-078 (unsealed fill).

To the east, L05D1-083 cuts L05D1-079 (unsealed fill), L05D1-091 (unsealed fill), L05D1-099 (kiln fill), L05D1-111 (unsealed fill), L05D1-114 (kiln fill), and L05D1-118 (unsealed fill) in vertical sequence.

WALL RELATIONS:

L05D1-083 cuts Stage B of W16150 (Nike wall) to the south (although several ashlar stretchers on the western side of Stage B were not robbed out and so continue their way north along the western edge of the robber trench).

Although it is not certain, it seems likely that the pile of stones in the middle of L05D1-083 constitutes an east-west extension of W05D1-109 (W. kiln wall). If so, it would mean that W05D1-109 cuts Stage B of W16150 in the north. This in turn would fit the hypothesis that W05D1-081 (southern kiln wall), W16150 on the west, and W26127 on the east together constituted an earlier stage of the kiln, which was subsequently modified (and narrowed) by the addition of W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall). This might also explain why W05D1-109 and W05D1-110 both abut W05D1-081--and why they share construction techniques relatively similar to each other, but quite different from that of W05D1-081.

*** ADDITIONAL PHOTOS: p05D1-9071, p05D1-9072.

Additional Observations/Value:

High Value: Robber trench adjacent to a kiln, with important kiln-related special finds (ceramic tubes).

summary: _____

Opened: Opened as the continuation of L05D1-061 when adjacent L05D1-062 (robber trench of Stage A of Nike wall W16150) came down on Stage B of W16150.

- Limits(N)** N Baulk.
- (S) W05D1-129.
- (E) W16150; L05D1-083.
- (W) W16127.

Closed: Not finished excavating. End of season.

Matrix: Matrix indistinguishable from that of L05D1-061 above: medium-brown soil, slightly darker in south, with many fragments of bone and several bits of charcoal. Large bone fragments concentrated in north of locus near top (elevation ~15.32 m.). Two tesserae of white marble, ~ 1.5 cm. square, found in center of locus near top (elevation ~15.30 m.). Many fist-size rocks emerged in south near bottom (elevation ~15.20 m.).

Relations: L05D1-078 represents the downward continuation of L05D1-061, and displays the same matrix. A long strip of fill separating W16127 from W16150 (and the latter's robber trench L05D1-083), it extends from north to south across the entire square.

L05D1-078 is cut by L05D1-083 (robber trench of Stage B of Nike wall W16150) in the north-east.

Additional Observations/Value: Medium/Low Value: unsealed fill separating two walls, and lacking in special contents.

summary: _____

Opened:	Opened in order to differentiate fill inside and outside of kiln.
Limits(N)	L05D1-111.
(S)	W05D1-081; L05D1-092.
(E)	W05D1-110.
(W)	W05D1-109.
Closed:	Closed to collapse L05D1-111 and L05D1-112 when their matrices appeared identical, and L05D1-111 came down on second course of W05D1-110 (E. kiln wall). Since the second course of W05D1-110 continues well beyond the truncated upper course, extending 0.65 m. further north, it was taken as evidence that the kiln interior actually extended further north than previously thought, encompassing most of L05D1-111 as well as L05D1-112.
Matrix:	Matrix identical to that of L05D1-099 above, L05D1-111 adjacent, and L05D1-114 below: very dense matrix of brown dirt with large chunks of burnt clay and pottery, pellets of burnt kurkar, bits of charcoal and sulphur-yellow powdery material, fragments of burnt bone, small lumps of (bronze?) slag, a slab of blackened plaster with traces of bronze, and the occasional piece of glass, including glass slag bonded to ceramic. The matrix is chunkier in the east, along E. kiln wall W05D1-110 (just as was the case in L05D1-099 above). Low pottery content. The entire locus was dry-sifted with 1-cm. screens, and all contents except pottery given to the Weizmann Institute.
Relations:	L05D1-112 constitutes the area "inside" the kiln as determined before the second course of W05D1-110 was discovered to the north: i.e., the pocket bounded by W05D1-109 (W. kiln wall), W05D1-080 (S. kiln wall), and the upper course of W05D1-110 (E. kiln wall). L05D1-111 and L05D1-112 are continued below by L05D1-114. See card for L05D1-114: provides retroactive justification of our decision to open L05D1-111 and L05D1-112 in order to differentiate fill inside and outside of kiln.

Additional Observations/Value:

High Value: kiln fill.

summary: _____

Opened: Opened when L05D1-071 came down on Stage B of W16150 (Nike wall) and a threshold stone in center of locus (which may or may not be the top course of W26204: see below).

- Limits(N)** W05D1-081; L05D1-080.
- (S)** W05D1-093.
- (E)** Material previously excavated in Square AR-15 (2000).
- (W)** W16150 (Nike wall).

Closed: Closed when came down on a continuous course of W26204 (which may or may not be its top course: see below).

Matrix: Clay-like soil, yielding suddenly to layer of loose, charcoal-grey dirt in eastern half. Large fragments of an amphora (basket # 05D1-0558) found in western half, amidst a concentration of rock rubble.

Relations: L05D1-082 is a rectangular locus in the south-east corner of the square, and is bordered on three sides by walls.

L05D1-082 is the continuation below of L05D1-071.

The threshold stone on which L05D1-071 came down was originally assumed to be in secondary use, and taken as constituting the highest stone in the top course of W26204. Excavation of L05D1-082, however, revealed that the threshold stone actually sits alone atop a continuous course of W26204 below. It is thus unclear as to whether the threshold stone is actually the sole remaining stone of the top course of W26204 (in which case L05D1-071 was the first locus to come down on W26204), or whether it was cast in as part of the fill above W26204 and simply happens to be in line with it (in which case the course on which it rests is the top course of W26204, and L05D1-082 was the first to come down on W26204). The genealogy shows both loci as coming down on W26204.

L05D1-082 has no clear relations with any adjacent loci.

Additional Observations/Value:

Low Value: unsealed fill with no clear relations with adjacent loci.

summary: _____

Opened: Opened when L05D1-091 came down on W05D1-109 (W. kiln wall), W05D1-110 (E. kiln wall), and an abundance of obviously burnt material.

- Limits(N)** N Baulk.
- (S) W05D1-081.
- (E) W26127; W05D1-110.
- (W) W05D1-109; L05D1-083.

Closed: Closed in order to differentiate putative inside and outside of kiln at northern limit of kiln walls W05D1-109 and W05D1-110.

Matrix: Very dense matrix of brown dirt with large chunks of burnt clay and pottery, pellets of burnt kurkar, bits of charcoal and sulphur-yellow powdery material, fragments of burnt bone, small lumps of (bronze?) slag, several chunks of calcified limestone, several small slabs of blackened plaster (?), and the occasional piece of glass, including a lump of glass slag bonded to ceramic. Also produced a circular ring of lead (basket # 05D1-0688), a bone needle (basket # 05D1-0689), and three mosaic tesserae, one charred black (basket # 05D1-0681). Much larger chunks in east, along W26127 and W05D1-110 (a trend continued in L05D1-111 and L05D1-112 below). Low pottery content, and no wasters were found. Wet-sifted 20 buckets with 1-mm. mesh (basket #'s: 05D1-0661 (pottery), 05D1-0662 (shell), 05D1-0663 (macrofauna), 05D1-0664 (microfauna)). The rest of the locus was dry-sifted with 1-cm. screens, and all contents except pottery given to the Weizmann Institute.

Relations: L05D1-099 includes the pocket bounded by kiln walls W05D1-109, W05D1-110, and W05D1-081, as well as the area north of the kiln walls which runs from the Nike wall's robber trench (L05D1-083) on the west to W26127 on the east. This northern area was excavated below as L05D1-111, while the area within the kiln walls was excavated below as L05D1-112.

L05D1-099 is cut by L05D1-083 (robber trench of Nike wall W16150) in the west.

Additional Observations/Value:

High Value: kiln fill.

summary: _____

Opened: Opened in order to differentiate fill inside and outside of kiln.

Limits(N) N Baulk.

(S) L05D1-112; W05D1-109; W05D1-110.

(E) W26127.

(W) L05D1-083.

Closed: Closed to collapse L05D1-111 and L05D1-112 when their matrices appeared identical, and when L05D1-111 came down on second course of W05D1-110 (E. kiln wall). Since the second course of W05D1-110 continues well beyond the truncated upper course, extending 0.65 m. further north, it was taken as evidence that the kiln interior actually extended further north than previously thought, encompassing most of L05D1-111 as well as L05D1-112.

Matrix: Matrix identical to that of L05D1-099 above, L05D1-112 adjacent, and L05D1-114 below: very dense matrix of brown dirt with large chunks of burnt clay and pottery, pellets of burnt kurkar, bits of charcoal and sulphur-yellow powdery material, fragments of burnt bone, small lumps of (bronze?) slag, a slab of blackened plaster (?), and the occasional piece of glass, including several lumps of glass slag bonded to ceramic. Also produced a mosaic tessera (charred black). The matrix is more compact and chunkier in the south (near L05D1-112), looser in the north. Much larger chunks in east, along W26127 (just as was the case in L05D1-099 above). Low pottery content. The entire locus was dry-sifted with 1-cm. screens, and all contents except pottery given to the Weizmann Institute.

Relations: L05D1-111 is a rectangular locus in the north of the square, possibly "outside" the kiln as determined by the extent of the kiln walls as then known. It stretches from L05D1-083 (robber trench of Nike wall W16150) on the west to W26127 on the east, its southern border defined by a line running from the northern edge of W05D1-109 (W. kiln wall) to the northern edge of the upper course of W05D1-110 (E. kiln wall).

L05D1-111 is cut by L05D1-083 (robber trench of Nike wall W16150) in the west.

L05D1-111 and L05D1-112 are continued below as L05D1-114.

See card for L05D1-114: provides retroactive justification of our decision to open L05D1-111 and L05D1-112 in order to differentiate fill inside and outside of kiln.

Additional Observations/Value:

High Value: fill from a kiln installation.

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened: Opened when L05D1-111 (unsealed fill) came down on second course of W05D1-110 (E. kiln wall), revealing a small cavity between W05D1-110 and W26127.

- Limits(N)** N Baulk.
- (S)** W05D1-110 (E. kiln wall).
- (E)** W26127.
- (W)** W05D1-110 (E. kiln wall); L05D1-114.

Closed: Not finished excavating. End of season.

Matrix: Though officially outside the kiln, the matrix of L05D1-115 closely resembles that of the other kiln-related fill loci (L05D1-099, L05D1-111 and L05D1-112, L05D1-114, and L05D1-117 and L05D1-118): very dense matrix of brown dirt with large chunks of burnt clay and pottery, pellets of burnt kurkar, bits of charcoal and sulphur-yellow powdery material, fragments of burnt bone, and small lumps of (bronze?) slag (though no glass or glass slag). (Note that this similarity of matrix would support the hypothesis that W05D1-081 (southern kiln wall), W16150 on the west, and W26127 on the east together constituted an earlier stage of the kiln, which was subsequently modified (and narrowed) by the addition of W05D1-109 (W. kiln wall) and W05D1-110 (E. kiln wall). For more detailed discussion of this hypothesis, see the card for W16150.) Low pottery content. The entire locus was dry-sifted with 1-cm. screens, and all contents except pottery given to the Weizmann Institute.

Relations: L05D1-115 is a small triangular-shaped locus in the north-east of the square, wedged between W05D1-110 (E. kiln wall), W26127, and the northern baulk.

L05D1-115 represents the continuation below of L05D1-111 (unsealed fill) to the east of W05D1-110.

Additional Observations/Value:

Medium Value: fill associated with the kiln installation.

summary: _____

Opened:	Opened when L05D1-001 (topsoil) came down on upper (Stage A) course of W16127 to find lower courses.
Limits(N)	N Baulk.
(S)	W16127.
(E)	L05D1-026.
(W)	F05D1-256.
Closed:	Closed when came down on second (Stage B) course of W16127.
Matrix:	Few rocks at top quickly gave way to brown dirt with few sherds, more compacted at bottom.
Relations:	<p>L05D1-025 is a small rectangular locus in the northwest corner of the square which continues the line of W16127 northwards a short distance.</p> <p>L05D1-025 cuts F05D1-250 and its makeup (L05D1-256) to the west.</p> <p>Relationship of L05D1-025 to L05D1-026 (sand pit) to east is unclear. L05D1-026 bottoms out on compacted brown dirt which appears identical to the matrix of L05D1-025.</p> <p>L05D1-025 cuts the top (Stage A) course of W16127 to the south, but covers the second course (Stage B) of W16127 which is directly below (see photo).</p>

Additional Observations/Value:

Medium Value: robber trench of top course of a Phase 1 wall.

summary: _____

Opened:	Closed when L05D1-001 (topsoil) came down on top (Stage A) course of W16127, F05D1-001, F05D1-250, L05D1-026 (sand pit), and L05D1-025 (robber trench).
Limits(N)	N Baulk.
(S)	L05D1-021.
(E)	L05D1-021.
(W)	L05D1-025.
Closed:	Closed when sand pit bottomed out onto brown dirt, later defined as part of L05D1-062 (robber trench of Nike wall W16150).
Matrix:	Light-brown sand, devoid of sherds or shells.
Relations:	<p>L05D1-026 is a small rectangular locus in the very north of square.</p> <p>L05D1-026 cuts L05D1-021 (floor makeup) and L05D1-032 (fill below) to the S and E.</p> <p>Relationship of L05D1-026 to L05D1-025 (robber trench of W16127) to the west is unclear. L05D1-026 bottoms out on compacted medium-brown dirt which appears identical to the matrix of L05D1-025.</p>

Additional Observations/Value:

Low Value: sand pit with no clear relationship to architectural features. (Probably a late natural feature, culturally sterile.)

<i>photo #(1):</i>		<i>photo#(2):</i>				<i>written by:</i>	MA <i>checked by:</i>

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened:	Phantom locus opened to provide number for phantom floor F05D1-024 (floor of L05D1-001 west of W16127).
Limits(N)	N Baulk
(S)	S Baulk
(E)	W16127, L05D1-025
(W)	W Baulk
Closed:	Phantom locus.
Matrix:	Almost no surface of F05D1-024 survives; its existence is inferred, however, from the intact floor makeup (L05D1-029) below, whose matrix of large cobblestones blankets the entire area beneath L05D1-024.
Relations:	<p>L05D1-024 and its floor take the form of a long triangular locus whose western and eastern sides are the W Baulk and W16127 (respectively) and base is the (no-longer extant) S Baulk.</p> <p>F05D1-024 is cut by L05D1-025 (robber trench of W16127)) to the NE.</p> <p>F05D1-024 appears to continue into the baulk to the N and W.</p> <p>While no remaining surface of F05D1-024 obviously reaches W16127 to the E, it is clear that the makeup of F05D1-024 (L05D1-029) does indeed reach W16127, as the cobblestones reach it (see photo).</p>

Additional Observations/Value:

High Value: prospect of a Phase 1 floor reaching a Phase 1 wall.

summary: _____

Opened:	Opened when concrete matrix of L05D1-021 (floor makeup of F05D1-001) above gave way to fill below.
Limits(N)	N Bulk.
(S)	Material previously excavated in Square AS-14 (1995-2000).
(E)	Material previously excavated in Square AR-15 (2000).
(W)	W16127; L05D1-026.
Closed:	Closed when came down on fragmentary floor (F05D1-032).
Matrix:	Light-brown dirt, occasionally verging on ashen, with many small pebbles and shells, but few sherds and only 3 fragments of roof tiles (far fewer than in L05D1-001). Copious chunks of wall plaster, especially in southern quadrant, as well as rocky rubble along southern edge and along W16127 to the west. Floor F05D1-032 has a very patchy floor surface, limited largely to the northern half of the locus, with only fragments of floor surface and makeup visible among the dirt and rocky rubble in the southern half of the locus.
Relations:	<p>L05D1-032 occupies the eastern half of square.</p> <p>F05D1-032 is cut by L05D1-026 (sand pit) in the NW.</p> <p>F05D1-032 appears to reach Stage A of W16127, intersecting the bevelled underbelly of the wall's topmost course.</p> <p>F05D1-001 may represent a later reflooring of F05D1-032.</p> <p>*** ADDITIONAL PHOTOS: p05D1-9057.</p>

Additional Observations/Value:

High Value: Earliest floor going with Stage A of W16127.

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened:	Opened to remove the floor makeup of F05D1-001.
Limits(N)	Baulk.
(S)	L16113 (in AS-14).
(E)	L26037 (in AR-15: Floor Makeup and Fill below F26015).
(W)	W16127; L05D1-026.
Closed:	Closed when floor makeup was removed.
Matrix:	Concrete with field stones and large pebbles, many shells (a representative sample were collected), some sherds. Included 1 fragment of roof tile. The Weizmann Institute sampled three different layers of the plaster (WIS05D1-207, WIS05D1-208, WIS05D1-209); analysis showed that the topmost layer of plaster consisted mostly of quartz, the middle layer of calcite and clay (both burned), and the bottom layer calcite and aragonite (probably from shell) as well as burnt clay.
Relations:	<p>L05D1-021 occupies the eastern half of the square.</p> <p>The stones of L05D1-021 rise to reach the top (Stage A) course of W16127 to the west (see photo).</p> <p>L05D1-021 is cut by L05D1-026 (sand pit) to the north-west.</p> <p>L05D1-021 is most likely the same as L26037 to the east in AR-15 (Floor Makeup and Fill below F26015, excavated in 2000).</p> <p>Relations of L05D1-021 to L16113 in AS-14 to the south are unclear, as the relevant cards from 1997 cannot be found, and the genealogies from 1995 and 1997 conflict.</p> <p>While the floors on either side of the top (Stage A) course of W16127 (F05D1-001 and F05D1-250) are of similar elevations, their makeups differ slightly: while L05D1-256 is comprised of evenly-sized large cobblestones, L05D1-021's makeup is more varied in consistency (sherds, shells, pebbles, etc.) and its stones are, on average, smaller. This might support the hypothesis that W16127 was indeed the outer (eastern) wall of a large building, and that F05D1-001 was outside it.</p>

Additional Observations/Value:

High Value: possible Phase 1 sealed floor makeup reaching a Phase 1 wall.

summary: _____

Opened:	to define rubble at N end of area under L04D1-097, L04D1-098 and L04D1-138, excavated in 2004.
Limits(N)	L04D1-163, excavated in AQ/15 in 2004
(S)	L05D1-010
(E)	L04D1-038, excavated in 2004
(W)	L04D1-042, excavated in 2004
Closed:	Came down on L05D1-058.
Matrix:	Hard-packed red gravelly soil with moderate amount of pottery, and kurkar rubble ranging from fist to melon-sized.
Relations:	L05D1-012 is covered by three loci excavated in 2004: L04D1-097, L04D1-098, and L04D1-138. L05D1-012 was cut by the 2 large robbing trenches running through AQ/14-15: L04D1-038 on the E, continued as L05D1-027, and L04D1-042 on the W, continued as L05D1-038. To the N, L05D1-012 was reached by material excavated as L04D1-163, which was rubbly fill. This locus was also reached on the south by fill that was somewhat less rubbly, L05D1-010. L05D1-012 covers L05D1-058, and L05D1-053.

Additional Observations/Value:

Low value: rubbly fill.

summary: _____

Opened:	To remove gray ashy fill adjacent to ashlar SW of L05D1-058, and below W05D1-028.
Limits(N)	L05D1-058
(S)	L05D1-011
(E)	L05D1-027
(W)	L05D1-044
Closed:	End of season.
Matrix:	Reddish-brown fill with lots of ash, hard packed in some spots and softer in others, with a moderate amount of pottery. Also present in L05D1-057 is a large worked kurkar block at the NW corner. Excavation revealed that it had no relation to the stones in the rubble pile of L05D1-058, but that it does sit on top of another, larger worked kurkar block. Special find: bronze coin (05D1-0612).
Relations:	L05D1-057 is covered by L05D1-052 and W05D1-028. It reaches rubble pile L04D1-058 to the N. L05D1-057 is cut by L05D1-027, and its continuation L05D1-067, to the E, and it is cut by L05D1-044 on the W. On the S, it is reached by rubbly fill L05D1-011, but the soft sandy fill that is present at the N end of L05D1-011 may in fact be an extension of the British trench, which may be cutting L05D1-057.

Additional Observations/Value:

Medium-to-low value: it is the only patch of fill in AQ/14 not cut by a robbing trench of some sort.

summary: _____

Opened:	To remove makeup of F05D1-008.
Limits(N)	L04D1-128
(S)	material excavated in AQ/13 in 2000
(E)	L04D1-042
(W)	material excavated in AR/14 in 2000, most likely as L26101
Closed:	Came down on F05D1-020.
Matrix:	Gray-white plaster on top of a thin layer of fine grayish soil. Very little pottery.
Relations:	<p>L05D1-020 is covered by F05D1-008. On the N, it is cut by British trench L04D1-128. L05D1-020 is a small area of floor material that was found under L05D1-008--see card for L05D1-008, and also section drawing. L05D1-020 extends to the E and S, and may have been a resurfacing or patch of the floor beneath it. L05D1-020 covers L05D1-031 a thick and shelly layer of floor makeup.</p> <p>Like all of the floors excavated in this part of AQ/14, and the floors that will be excavated below this, F05D1-020 is cut on the N and E by 2 robbing trenches, L04D1-128 and L04D1-042, respectively, and the material to the W and S was removed in the excavation in 2000 of AR/14 and AQ/13, in AR/14 as L26101. F05D1-020 covers and seals L05D1-031, a thin layer of gray-white plaster over a thick shelly layer of floor makeup.</p>

Additional Observations/Value:

Medium value: sealed locus in series of floors and floor resurfacings, but very little pottery.

summary: _____

Opened:	To continue excavating rubbly fill below L04D1-043.
Limits(N)	L05D1-010
(S)	baulk
(E)	L05D1-027
(W)	L05D1-038
Closed:	L05D1-011 and L05D1-067 came down on possible tabun L05D1-072.
Matrix:	Soft yellow sand with lenses of harder packed darker brown gravelly soil, some kurkar rubble, pieces of concrete, and a fair amount of pottery. Half a column drum (05D1-0279), still cemented in situ, was uncovered along the western edge of the locus. Special finds: iron nail fragment (05D1-0303). Weizmann samples were taken from the rubble at the southern end of the locus when we uncovered a number of burnt tiles and possible tabun L05D1-072 (05D1-0326 to -0333).
Relations:	<p>L05D1-011 is a continuation of the rubbly fill excavated in L04D1-043 above it in 2004. Like the fill above it, it is cut by the 2 large N-S robbing trenches, L05D1-027 and its continuation, L05D1-067 on the E; and L05D1-038, and its continuation, L05D1-044, on the W. L05D1-011 reaches material in the baulk to the S. To the N, L05D1-011 reaches fill L05D1-010, and the fills below it, L05D1-052 and L05D1-057. L05D1-011 covers the western extent of possible tabun L05D1-072.</p> <p>The northern extent of this locus probably included the eastern continuation of the British trench, excavated in AQ/14 as L04D1-128 and this season as L05D1-039. because the whole of L05D1-011 was soft and sandy, the distinction between the locus and any continuation of the trench was difficult to determine until L05D1-011 had been taken down and the cut along the S end of L05D1-010 and the locus below it, L05D1-052, was plainly visible.</p> <p>The pahse 1 rubble that was found along the southern end of the locus (see photo) probably came from the hypocaust floor/bath area of the big building excavated in AP/13 in 2004.</p> <p>The half-column drum (05D1-0279) may be the only surviving part of an E-W cross-wall for the interior of the big building, which may have abutted W26073.</p>

Additional Observations/Value:

Low value, but it is not an average rubble locus, since it uncovered evidence of an interior cross-wall for the phase 1 big building.

summary: _____

Opened:	To remove makeup of F05D1-007.
Limits(N)	W04D1-127
(S)	L04D1-128
(E)	L04D1-042
(W)	W04D1-165
Closed:	Came down on layer of floor resurfacing that extended under W04D1-127 and W04D1-165; collapsed into L05D1-030.
Matrix:	Whitish-gray plaster floor material with thin layer of grayish soil below. Very little pottery. L05D1-019 was excavated in 2 baskets, the first (05D1-0088) as the floor makeup itself, and the second (05D1-0091) as the thin layer of fill below it.
Relations:	L05D1-019 is covered and sealed by F05D1-007. L05D1-019 reaches the lower courses of W04D1-127 and W04D1-165, on the N and W, respectively. On the S and E, it is cut by robbing trenches L04D1-128 and L04D1-042, respectively. L05D1-019 does not reach the cut of L04D1-128 along its entire S side, ending instead in an uneven line, part of which was cut by the robbing trench. L05D1-019 covers L05D1-030. Discussion in the field of the floor-like surface uncovered underneath L05D1-019 resulted in the decision that this is in all likelihood not a floor, but rather a hard-packed layer of subfloor. Therefore L05D1-030 was removed as a separate layer of floor makeup, extending to the northern limit of the area under W04D1-127.

Additional Observations/Value:
High value: fill below intact floor.

summary: _____

Opened:	To continue removing British trench L04D1-128.
Limits(N)	L05D1-030 and material below (see relations)
(S)	L05D1-031 and material below (see relations)
(E)	L05D1-038
(W)	material excavated in AR/14 in 2000 as L26126
Closed:	Collapsed with L26126 into L05D1-097.
Matrix:	Very soft yellow sand with occasional lenses of darker brown sand, and not much pottery.
Relations:	L05D1-039 is a continuation of a portion of the British trench that was cuts through the series of floor layers that cover the western third of AQ/14. It cuts through material below L05D1-030 at the N, namely L05D1-098, and the locus below it, L05D1-123. To the S, L05D1-039 cuts material below L05D1-031, namely L05D1-077 (see section drawing). N.B.: L05D1-039 cuts through the "floor sandwich" that runs along the western side of AQ/14 and AQ/15, but it cuts only the layers of floor resurfacings, not any of the true floors. As part of the British trench, it should have cut robbing trench L05D1-038 and L05D1-044, but a distinction between the fill of the British trench and the robbing trench was not observed. Material to the W was excavated in AR/14 in 2000 as sandy pit L26126. L05D1-039 continues as L05D1-097, which extends to the W.

Additional Observations/Value:

Very low value.

summary: _____

Opened:	To remove fill adjacent to W05D1-028.
Limits(N)	L05D1-058
(S)	L05D1-011
(E)	L05D1-027, W05D1-028
(W)	L05D1-044
Closed:	Came down on ashy gray fill of L05D1-057, and foundation trench for W05D1-028.
Matrix:	reddish-brown slightly gravelly fill, similar to that of L05D1-010. Some small (fist-to-melon-sized) kurkar rubble, a few ashy lenses, small amount of pottery.
Relations:	L05D1-052 is covered by L05D1-010. It is reached by the rubble pile L05D1-058 to the N. It reaches W05D1-028 and its foundation trench to the E. On the S, it is reached by L05D1-011, and may be cut by an extension of the British trench that was excavated as part of L05D1-011. L05D1-052 is cut by robbing trench L05D1-038 and its continuation, L05D1-044, to the W. L05D1-052 covers L05D1-057.

Additional Observations/Value:
L05D1-052 is one of the few loci in AQ/14 not disturbed by a robbing trench of some sort; medium value.

Images:	Image Number

summary: _____

Opened:	To remove the southern continuation of robbing trench L05D1-038.
Limits(N)	L05D1-043
(S)	W26073
(E)	L05D1-011, L05D1-010, L05D1-012, L05D1-053
(W)	material below L05D1-030 and L05D1-031; L05D1-039
Closed:	End of season.
Matrix:	loose yellow-to-brown very sandy soil, a bit harder-packed in some patches and very soft and sandy in others, with many chunks of kurkar and limestone rubble, some of which are worked blocks. Little to moderate pottery. Special find: fragment of basalt mortar, with top of one leg intact (05D1-0245).
Relations:	<p>L05D1-044 cuts most of the loci around it. L05D1-044 is a continuation of the southern portion of L05D1-038, which was split when an ashlar was uncovered that appeared to be part of a wall, but was determined to be rubble. L05D1-044 meets L05D1-043 to the N, and on the S, it cuts W26073.</p> <p>On the E, L05D1-044 cuts L05D1-011; L05D1-052 and the locus below it, L05D1-057; L05D1-058.</p> <p>On the W, L05D1-044 cuts material below L05D1-031: L05D1-095, L05D1-096, L05D1-113, L05D1-119; it cuts material below L05D1-030: L05D1-123, L05D1-121 and L05D1-122--see section drawings for relations of loci cut by L05D1-044 and the loci above them. Also on the W, L05D1-044 meets British trench L05D1-039.</p> <p>N.B.: L05D1-044 is a continuation of a robbing trench that cuts layers of floor resurfacings, but it does not cut any true floors.</p> <p>Please note that the top plan shows a bird's eye view of the loci that were already open when L05D1-044 was opened; top plan #2 shows the loci actually cut by L05D1-043 and L05D1-044.</p>

Additional Observations/Value:

Low value. Robbing trench for phase 1 wall. End-of-season sweeping uncovered an ashlar laid flat on line with W26073, with mortar on its surface, possibly indicating the topmost surviving course of the wall.

Closed: End of season; not excavated.

Matrix: Loose whitish-gray ash on top of a packed layer of the same. Weizmann sampling of the ash (taken as part of L05D1-067, 05D1-0496 to -0504) showed that 1) the ash was wood ash, burnt at a very high temperature; and 2) there was a high concentration of lead in the loose upper layer. A number of lead fragments were found in the ash removed as part of L05D1-067 (05D1-0483).

Relations: L05D1-072 was not excavated. It was covered by L05D1-067 and L05D1-011. To the N and S, it reaches unexcavated fill below L05D1-067. To the E, it reaches material in the baulk. To the W, it reaches unexcavated material below L05D1-011.

Additional Observations/Value:

This locus was not excavated during the season, and is defined by the extent of the ash layer. Since it may be a tabun or industrial installation, it has high value.

summary: _____

Opened:	L05D1-010 came down on 5 small stones in a row.
Limits(N)	L05D1-058
(S)	L05D1-052
(E)	L05D1-027
(W)	L05D1-052
Closed:	Both courses of wall removed.
Matrix:	2 courses of medium-sized field stones (kurkar and limestone, largest app. 20x20x20 cm), some with finished edges on their western sides. 1 coin found in wall (05D1-0525).
Relations:	W05D1-028 is covered by L05D1-010. To the N, it is reached by L05D1-058. On the E, it is probably cut by robbing trench L05D1-027. W05D1-028 is reached by L05D1-052 to the S and W. Traces of a narrow foundation trench are visible on the W face at the southern end of the wall. Removal of the wall showed that the fill underneath it was the same as L05D1-057 to the W, so the fill under the wall was collapsed into L05D1-057.

Additional Observations/Value:

Medium value: small, 2-course wall, not sealing material below it. Because of the rubbly and possibly disturbed nature of L05D1-011 to the S, the southern extension of W05D1-028 may have been excavated as part of that locus.

summary: _____

Opened: To remove the 2 patches of fragmentary floor makeup of F05D1-031, and the adjoining resurfacing material.

Limits(N) L05D1-039

(S) material excavated in AQ/13 in 2000

(E) L04D1-042

(W) material excavated in AR/14 in 2000

Closed: Collapsed with L26196, and L26199 into L05D1-095 and L05D1-096. N.B.: some of the material at the southern end was then determined to be the last remaining part of L05D1-077, and was removed separately as L05D1-119.

Matrix: Medium-to-hard-packed gray-brown fill with moderate pottery, fragments of multiple type 12 lamps (05D1-0538 and -0560), a few small pieces of plaster.

Relations: L05D1-077 is covered by L05D1-031. It is cut on the N by British trench L05D1-039, and on the E by robbing trench L04D1-042, continued in 2005 as L05D1-038 and L05D1-044. Material to the S was excavated in AQ/13 in 2000. Material to the W in AR/14 was also removed in 2000, with unsealed fills L26196 and L26199 immediately adjacent to the area of L05D1-077. L05D1-077 covers but does not seal possible robbing trench L05D1-095, L05D1-096 and L05D1-119.

Additional Observations/Value:

Medium value: fill from below lowest resurfacing layer at bottom of floor sandwich yielding almost entirely Hellenistic pottery.

summary: _____

Opened: A soil difference was noted in L05D1-096, between the softer fill in the N and the harder-packed strip of fill in the S, which was designated L05D1-119. This locus is part of the bottommost layer in a series of floorlike accumulations which ran along the western limit of AQ/14 and AQ/15.

Limits(N) L05D1-096
(S) material excavated in 2000
(E) L05D1-044
(W) L05D1-096

Closed: End of season.

Matrix: Hard-packed, slightly ashy, grayish fill with a moderate amount of pottery.

Relations: L05D1-077 covers L05D1-119. On the N and W, L05D1-119 is reached by L05D1-096 and the locus below it, L05D1-113. On the E, L05D1-119 is cut by L05D1-044. Material to the S of L05D1-119 was excavated in AQ/13 in 2000.

Additional Observations/Value:

Medium value: one of lowest layers in "floor sandwich", producing good context pottery.

summary: _____

Opened:	To remove makeup of F04D1-164.
Limits(N)	L04D1-128
(S)	material excavated in AQ/13 in 2000
(E)	L04D1-042, W04D1-185
(W)	material excavated in AR/14 in 2000, probably as part of L26101
Closed:	Came down on F05D1-008.
Matrix:	Gray kurkar mixed with some ash and carbon flecks. Small amount of pottery.
Relations:	<p>L05D1-008 is one of a series of floors in the small plateau created by the excavation of 1) AR/14 to the W, and AR/13 to the S in 2000; and 2) robbing trenches L04D1-128 to the N, and L04D1-042 to the E. F04D1-164 was the first in this series of floors to be removed, and it may be the same material as F04D1-129, since the floor makeup and elevations are similar.</p> <p>L05D1-008 covers a partial floor, F05D1-008, which seals floor makeup L05D1-020 beneath it. L05D1-008 also covers F05D1-020--see section drawing for details. The makeup of F05D1-008 became L05D1-020; excavation of this showed that L05D1-020 was a small patch of floor material resting on a larger area of floor; this floor then became L05D1-020, even though most of it had originally been revealed with the excavation of L05D1-008. F05D1-008 is cut on the N by robbing trench L04D1-128, and material to the W of this floor was excavated in AR/14 in 2000 as L26101.</p> <p>Weizman sampling (05D1-0038; 05D1-0045 to -0052) indicated that F05D1-007 and F05D1-008 are made of the same material.</p>

Additional Observations/Value:

Medium value: sealed floor makeup in series of floors and floor resurfacings.

summary: _____

Opened:	To remove material below loci left unexcavated at end of 2004 season.
Limits(N)	L05D1-012
(S)	L05D1-011
(E)	L04D1-038, excavated in 2004
(W)	L04D1-042, excavated in 2004
Closed:	Came down on W05D1-028.
Matrix:	hard-to-medium packed red gravelly soil with a moderate amount of pottery, a few ashy lenses and some kurkar rubble, concentrated in the northern part of the locus. 1 bronze coin (05D1-0086).
Relations:	L05D1-010 is covered by 3 loci excavated in 2004: L04D1-097, L04D1-098, L04D1-138. It is cut by the massive robbing trenches that plow through AQ/14-15: L04D1-038, continued as L05D1-027 at the E, and L04D1-042, continued as L05D1-038 to the W. Rubbly fill L05D1-012 reaches it to the N, and on the S, it is reached by L05D1-011. L05D1-010 covers W05D1-028, L05D1-052 and L05D1-058. L05D1-010 is notable because it is the only locus in AQ/14 not part of a robbing trench or rubbly, disturbed fill.

Additional Observations/Value:

	Medium value: fill not disturbed by a robbing trench of some sort.

summary: _____

Opened:	To remove surfacing material below L05D1-019, W04D1-127 and W04D1-165.
Limits(N)	L05D1-037
(S)	L04D1-128
(E)	L04D1-042
(W)	material excavated in AR/14 in 2000, probably as L26115
Closed:	Collapsed with L05D1-037, L05D1-022, L05D1-003, and L05D1-002 into L05D1-051.
Matrix:	Hard-packed very shelly fill in reddish-brown soil. Little to moderate pottery.
Relations:	L05D1-030 is covered by floor makeup L05D1-019, W04D1-127, and W04D1-165. It is reached by fill L05D1-037 to the N. On the E and S, it is cut by robbing trench L04D1-042, and British trench L04D1-128, respectively. Material to the W was removed as part of the excavation of AR/14 in 2000, as L26115. L05D1-030 covers L05D1-051. L05D1-030 was collapsed with L05D1-037, L05D1-022, L05D1-003 and L05D1-002 when it was discovered that all 5 loci covered the same layer of what appears to be surfacing material that ran along the west side of robbed-out wall 26073.

Additional Observations/Value:

Medium value: unsealed floor resurfacing layer.

summary: _____

Opened:	To remove floor makeup of F05D1-020.
Limits(N)	L04D1-128, excavated in 2004
(S)	material excavated in AQ/13 in 2000
(E)	L04D1-042
(W)	L26115, excavated in AR/14 in 2000
Closed:	Came down on F05D1-031.
Matrix:	Thin layer of whitish-gray plaster/crushed kurkar on top of thick layer of shells in reddish-brown soil. Special finds: large fragment Megarian bowl with Amazonomachy (05D1-0169), and fragment of herm or Bes brazier support (05D1-0482).
Relations:	L05D1-031 is covered at the NW by L05D1-020. Most of the floor material was uncovered with the removal of L05D1-008, and the remainder of it was found under L05D1-020: see cards for L05D1-008 and L05D1-020. Like L05D1-008, L05D1-031 is cut on all 4 sides: on the N and E by British trench L04D1-128, and robbing trench L04D1-042, respectively, and on the S and W by material excavated in AQ/13 and AR/14, respectively. L05D1-031 covers a fragmentary floor, and the fill below it, L05D1-077. L05D1-031=L26115 in AR/14 (2000).

Additional Observations/Value:

High value: sealed floor in floor sandwich producing good pottery and psecial finds.

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened:	L05D1-010 and L05D1-012 came down on 3 large worked stones in line, originally designated a wall. This designation was revoked when F05D1-076 was discovered to extend underneath the stones.
Limits(N)	L05D1-053
(S)	L05D1-052, W05D1-028
(E)	L05D1-027
(W)	L05D1-044
Closed:	Rubble removed, and came down on F05D1-076.
Matrix:	Mostly large pieces of kurkar and limestone rubble, with some hard-packed reddish soil on the E and W sides of the locus. One piece of rubble is a cut-down Doric capital (05D1-0860).
Relations:	<p>L05D1-058 is covered by L05D1-010 and L05D1-012. It is reached on the N by L05D1-053 and the fill below it, L05D1-076. On the E it is cut by L05D1-027 and its continuation, L05D1-067, and it is also cut on the W by L05D1-044. On the S, it is reached by L05D1-052 and the fill below that, L05D1-057. Also on the S, L05D1-058 cuts W05D1-028. L05D1-058 covers the southern continuation of F05D1-076 (see card for L05D1-076 for floor relations).</p> <p>L05D1-058 was initially opened as a wall, since the topmost course seemed to be in line with W16634 in AR/14. Continued excavation also revealed a 2nd course, in the form of a badly-worn column capital, and also an ashlar at the W end of the locus, not in line with the rest of the rubble. Excavation of L05D1-057 showed that the square ashlar in that locus had no relationship to the rubble, and that the southern edge of F05D1-076 could be traced to the W from underneath the fragmentary column capital. Therefore W05D1-058 was designated rubble, not wall.</p>

Additional Observations/Value:

	Low value.

summary: _____

Opened:	L05D1-002, L05D1-003, L05D1-022, L05D1-037 and L05D1-030 all came down on the same layer of surfacing material, and were collapsed into L05D1-051
Limits(N)	L04D1-117
(S)	L05D1-039
(E)	L04D1-118, L04D1-119, L05D1-043, L05D1-044
(W)	material excavated in AR/14 in 2000 as L26163, and material in AR/15
Closed:	Came down on F05D1-051.
Matrix:	Hard-packed grayish-brown fill with some shells and a good assortment of bones; moderate amount of pottery. Special finds: fragments of faience bowl (05D1-0414), possible iron knife with handle (05D1-0391).
Relations:	<p>L05D1-051 is one of several loci in the long N-S pedestal left by 1) the excavation of AR/14 and AR/15 in 2000; and 2) the excavation of robbing trench L04D1-042 and adjacent loci to the N in 2004. L05D1-051 is reached on the N by material left unexcavated underneath L04D1-117. On the E, it is cut by sandy pit L04D1-118 and robbing trench L04D1-119 and the locus above them, L04D1-093. L05D1-051 is also cut on the E by robbing trench L05D1-042. On the S, L05D1-051 is cut by L04D1-128, part of the British trench. Material to the W was excavated in 2000. L05D1-051 covers a small patch of floor, and the locus beneath it, L051-084.</p> <p>F05D1-051 is one small patch of kurkar floor along the east side of the locus, in AQ/14. It is cut on the W, perhaps as part of the excavation of L26163 in AR/14.</p> <p>L05D1-051 is probably the same as L26163 in AR/14.</p> <p>*other loci above: L05D1-037, L05D1-030</p>

Additional Observations/Value:

Medium value: long layer of floor resurfacing material, producing decent context pottery.

(W) L05D1-053, L05D1-058, L05D1-057, L05D1-011

Closed: Came down on possible tabun L05D1-072.

Matrix: Reddish-brown fill with chunks of mortar, kurkar fieldstone rubble (melon-sized), and ash in the area of the possible tabun, as well as pieces of roof and hypocaust tiles in the southern end. Special find: small (1 cm sq.) piece gold leaf (05D1-0502). The ashy area above L05D1-072 was removed as part of this locus, and this part of the excavation of L05D1-067 produced a number of lead fragments (05D1-0483); see card for L05D1-072.

Relations: L05D1-067 is covered by L05D1-027. On the N it cuts F05D1-027, and reaches the unexcavated material below W04D1-125. L05D1-067 extends to the baulk on the E. To the S, L05D1-067 extends to the baulk, and probably cuts W05D1-090 and the unexcavated fill below it. On the W, L05D1-067 cuts L05D1-053 and the fill down to floor below it, L05D1-076, and the floor, F05D1-076; rubble pile L05D1-058, L05D1-057, and L05D1-011. L05D1-067 covers possible tabun L05D1-072.

L05D1-067 contained a fair amount of hypocaust tiles, and some burnt caly at its southern end, probably from the hypocaust floor/bath area of the big building, excavated in AP/13 in 2004. This same sort of rubble was also found at the southern end of the adjacent locus, L05D1-011, showing that the disturbance to this are extended across most of the square.

Additional Observations/Value:

Robbing trench for phase 2 wall--low value. The gold foil was probably just under the surface of L05D1-053, and was brought to the surface by traffic through the area, and then blown into L05D1-067.

summary: _____

Opened:	To continue excavating robbing trench L04D1-042.
Limits(N)	L04D1-119, excavated in 2004
(S)	W26073
(E)	L05D1-012, L05D1-010, L05D1-011, L05D1-053
(W)	L05D1-022, L05D1-037, L05D1-030, L05D1-031, and material below; L05D1-039
Closed:	Came down on ashlar, either part of possible E-W wall N of L05D1-012, or perhaps part of W26073.
Matrix:	Loose yellow-to-brown sand mixed with some darker and harder-packed soil, with large pieces of kurkar rubble.
Relations:	<p>L05D1-038 is the continuation of robbing trench L04D1-042. Its northern relation is not clear: the question of whether it cut robbing trench L04D1-119, or was cut by it can perhaps be answered by excavation of that part of AQ/15. To the E, it cuts L05D1-053, L05D1-012, L05D1-010, and L05D1-011. The southern limit of L05D1-038 is the wall it robbed out, W26073. On the W, L05D1-038 is probably cut by British trench L05D1-039. North of the British trench, L05D1-038 cuts L05D1-084 and L05D1-098. Also on the W, but to the south of the British trench, L05D1-038 cuts L05D1-077 and the fill below that, L05D1-084. L05D1-038 covers L05D1-043 and L05D1-044: see section drawings (d05D1-1820 and d05D1-1821) for relations; see also top plans #1 for both L05D1-043 (d05D1-1824) and L05D1-044 (d05D1-1826).</p> <p>N.B.: L04D1-042 and L05D1-038 cut on the W a number of the floor resurfacing layers that extend from AQ/14 through AQ/15, but they do not cut many of the true floors. L05D1-038, in fact, does not cut any true floors.</p>

Additional Observations/Value:

Low value.

summary: _____

Opened:	To continue excavating robbing trench L04D1-038.
Limits(N)	W04D1-125, L04D1-162
(S)	W05D1-090
(E)	baulk
(W)	L05D1-053; L05D1-012, L05D1-010, W05D1-028, L05D1-011
Closed:	Came down on plaster floor (F05D1-027) at N end of locus.
Matrix:	Medium brown soil, fairly loosely-packed, with large chunks of kurkar rubble, including some broken ashlar, and some with concrete mortar still on them. Little to moderate amounts of pottery. Special find: limestone sculpture fragment (right thigh?), 05D1-0124. NB: We were unable to locate this fragment at the end of the season.
Relations:	L05D1-027 is the continuation of robbing trench L04D1-038, excavated in 2004, which robbed out W04D1-125 to the N. Also to the N, it cuts fill below L04D1-162, which was removed after the closing of L05D1-027 as L05D1-073. Excavation of L05D1-027 and its continuation, L05D1-067, revealed that what was thought to be the continuation of the wall to the S in AQ/13, now W05D1-090, is in fact not a part of the same wall, but a different construction. L05D1-027 extends to the baulk on the E, and it cuts on the W L05D1-053, L05D1-012, L05D1-010, and also possibly L05D1-011. L05D1-027 covers F05D1-027, L05D1-067 and L05D1-068. note: 31 baskets wet-sieved on July 6th (05D1-0118 to -0121). F05D1-027 continues to the N, where it ends just S of material below L04D1-122. It continues to the E, into the baulk. On the S, F05D1-027 is cut by L05D1-067. F05D1-027 continues to the W under W04D1-125.

summary: _____

Opened:	To remove material below L05D1-098 in the area N of possible robbing trench L05D1-121.
Limits(N)	unexcavated material below L05D1-098
(S)	L05D1-121
(E)	L05D1-043. L05D1-044
(W)	material excavated in AR/15 in 2000
Closed:	End of season.
Matrix:	Medium-to-hard-packed slightly reddish soil with a moderate amount of pottery, and some small pieces of kurkar rubble.
Relations:	L05D1-122 is covered by L05D1-098. L05D1-122 at the N reaches unexcavated material below L05D1-098. On the E, L05D1-122 is cut by robbing trenches L05D1-043 and L05D1-044. L05D1-122 is cut by possible robbing trench L05D1-121 at the S. Material to the W of L05D1-122 was excavated in 2000.

Additional Observations/Value:

Medium-low value: fill below lowest layer in series of floors and floor resurfacings.

summary: _____

Opened:	To remove 2 patches of fragmentary floor makeup F05D1-084 and the adjoining floor resurfacing material.
Limits(N)	L04D1-117
(S)	L05D1-039
(E)	L04D1-118, L04D1-119, L04D1-042
(W)	material excavated in AR/14 and AR/15 in 2000
Closed:	Came down on 2 patches of floor, F05D1-084.
Matrix:	Medium-packed gray fill with small fragments of wall plaster, some shells, a few bones, a small amount of pottery.
Relations:	L05D1-084 is covered by L05D1-051. It is cut on all 4 sides: on the N by pit L04D1-117, and the E by L04D1-118 and robbing trench L04D1-119, and also on the E by robbing trench L04D1-042, which was continued in 2005 as L05D1-038, L05D1-043 and L05D1-044. On the S, it is cut by British trench L05D1-039. Material to the W was excavated in 2000, probably as L26163. L05D1-084 covers but does not seal L05D1-098 due to the fragmentary nature of the floor patches. F05D1-084 consists of 2 patches which were cut on the E by excavation of material in AR/14 and AR/15, probably as part of L26163 and the loci below it.

Additional Observations/Value:

NB: A preliminary look at the pottery shows that this floor is Phase 3.--SRM Medium value: lowest fragmentary floor in floor sandwich, but unsealed, yielding almost entirely Hellenistic pottery.

summary: _____

Opened:	To define and remove rubble and fill between W04D1-175 and L05D1-058.
Limits(N)	W04D1-175
(S)	L05D1-058
(E)	L05D1-027, W04D1-125
(W)	L05D1-043, L05D1-044
Closed:	Rubble removed, and fill excavated down to level of ashy pit-lilke material.
Matrix:	Loose gray-to-brown soil with small to moderate amount of pottery and large pieces of kurkar rubble, many of which were worked on at least one side. Most of the rubble was adjacent to L05D1-058, and a few pieces were in the northern section of the locus. One piece of rubble appears to be a a badly weathered cornice. Special find: 1/4 basalt footed mortarium (05D1-0389).
Relations:	L05D1-053 is covered by L04D1-163 and L05D1-012. L05D1-053 reaches W04D1-175 to the N, and L05D1-058 to the S. It is cut on the E and W by robbing trenches L05D1-027 and L05D1-043 and L05D1-044, respectively. Also on the E, it reaches W04D1-125. L05D1-053 covers L05D1-076.

Additional Observations/Value:
Medium-low value: unsealed fill reaching phase 2 walls.

summary: _____

Opened:	To trace the northern extent of F05D1-027.
Limits(N)	unexcavated material under L04D1-162
(S)	L05D1-027
(E)	baulk
(W)	W04D1-125
Closed:	Came down on F05D1-027.
Matrix:	medium-brown slightly sandy soil with minimal pottery (2-3 Roman sherds).
Relations:	L05D1-073 is a continuation of L04D1-162. It reaches fill under the remainder of L04D1-162 to the N, and extends to the baulk on the E. To the S, L05D1-073 is reached by L05D1-027 and the locus below it, L05D1-067. On the W, it reaches a 2nd course of the lower, eastern extent of W04D1-125. L05D1-073 covers F05D1-027.

Additional Observations/Value:

	Medium-low value: fill covering floor which extends under phase 2 wall.

summary: _____

Opened:	To remove makeup of F04D1-147.
Limits(N)	W04D1-136
(S)	W04D1-127
(E)	L04D1-042.
(W)	material excavated in AR/15 in 2000.
Closed:	Came down on F05D1-004.
Matrix:	Gray concrete with very few shells and some pottery.
Relations:	<p>L05D1-004 is sealed by F04D1-147. It reaches W04D1-136 to the N, and the second course of W04D1-127 to the south. To the E, L05D1-004 is cut by robbing trench L04D1-042. The material to the W of L05D1-004 was excavated in AR/15 in 2000. L05D1-004 covers L05D1-022 and L05D1-037, a small patch of concrete/kurkar floor, and a small area of fill.</p> <p>F05D1-004 is a small patch of kurkar/concrete floor that reached W04D1-136 to the N, but it is uncertain whether or not it was cut by the robbing the northern continuation of L04D1-042 because the patch is so small. F05D1-004 seals the small patch of floor makeup beneath it, L05D1-022, and is one in a series of floor resurfacings that runs along the W side of the robbing trench for W26073.</p>

Additional Observations/Value:

Medium value: sealed fill below phase 2 floor, but producing little pottery.

unit: *phase:* *stage:* *stratum:* *PoM:*

summary: _____

Opened: To remove pit-like material revealed by the excavation of L05D1-053.

Limits(N) W04D1-175

(S) L05D1-058

(E) L05D1-067, W04D1-125

(W) L05D1-043, L05D1-044

Closed: Came down on F05D1-076.

Matrix: Loose ashy gray fill with lots of small (orange-sized) pieces of kurkar and limestone rubble, tending toward reddish-brown hard-packed soil in the W. Special find: 1/4 basalt mortarium (05D1-0518).

Relations: L05D1-076 reaches W04D1-175 to the N and L05D1-058 to the S. It is cut on the E by robbing trench L05D1-067. L05D1-076 is also met on the E, by the unexcavated fill under W04D1-125. L05D1-076 is cut on the W by robbing trench L05D1-043, as well as by robbing trench L05D1-044. L05D1-076 covers pit L05D1-126.

F05D1-076 is cut on the E by pit L05D1-126, and also by robbing trench L05D1-067. It continues to the S under L05D1-058, and to the W it reaches unexcavated material. F05D1-076 comes close to but does not quite reach W04D1-175 to the N. F05D1-076 was not excavated due to the end of the season.

Additional Observations/Value:

Floor adjacent to phase 2 wall: high value.

summary: _____

Opened:	To remove makeup of F05D1-004.
Limits(N)	L05D1-003
(S)	L05D1-037
(E)	L04D1-042
(W)	material excavated in AR/15 in 2000
Closed:	Collapsed with L05D1-002, L05D1-003, L05D1-037 and L05D1-030 into L05D1-051.
Matrix:	Whitish-gray plaster covering a small amount of gray soil, with a significant amount of ash along the western edge.
Relations:	L05D1-022 is covered by F05D1-004, but the quality of the floor is poor enough, and the locus narrow enough to merit the designation of this fill as unsealed. L05D1-022 reaches L05D1-003 to the N, and L05D1-037 to the S. To the E, it is cut by the robbing action of L04D1-161 and the loci above it. Material to the W was removed during the excavation of AR/15 in 2000. L05D1-022 covers L05D1-051. Note: L05D1-022 came down on a layer of extremely patchy floor-like material, but it was decided that there was no floor, rather it was one of series of hard-packed resurfacings. Removal of L05D1-002 and L05D1-003 to the N revealed that they and the loci to the S, L05D1-037 and L05D1-030 were all part of the same resurfacing action, and all 5 were collapsed into L05D1-051.

Additional Observations/Value:

Medium-low value: small "unsealed" locus (due to its size), yielding little pottery.

Images:	Image Number	
	d05D1-1802

summary: _____

Opened:	L05D1-098 and L26197 were collapsed into L05D1-121, possible robbing trench of W16634.
Limits(N)	L05D1-122; material in AR/14 eroded since 2000
(S)	L05D1-097, L05D1-123
(E)	L05D1-044
(W)	W16634
Closed:	End of season.
Matrix:	A wide lens of whitish plastery fill (05D1-0871), above medium-packed brownish fill with moderate pottery, and a large number (1 bucket) of tabun tile fragments.
Relations:	<p>L05D1-121 is covered by L05D1-098 and L26197. It cuts L05D1-122 to the N; other material to the N has eroded since the 2000 season. L05D1-121 is cut on the E by later robbing trench L05D1-044. To the S, L05D1-121 cuts L05D1-123. Also to the S, L05D1-121 is probably cut by British trench L05D1-097. L05D1-121 cuts W16634 at the W.</p> <p>L05D1-121 was opened as a putative robbing trench for W16634 on the assumption that the series of hard-packed resurfacing layers that ran along the W side of robbing trench L05D1-044 had been removed. However, examination of pottery in the field showed that the contents were mixed, and therefore contents from the E and W halves of the locus were basketed separately: 05D1-0892 for material from the E, and 05D1-0893 for material from the W.</p>

Additional Observations/Value:

	Low value: robbing trench for phase 2(?) wall.

summary: _____

Opened:	To remove fill S of robbing trench L05D1-095.
Limits(N)	W26100, L05D1-095
(S)	W5680, L05D1-119, material excavated in AQ/13 in 2000
(E)	L05D1-044
(W)	W16373B
Closed:	Came down on northern face of W10078, and a change in soil from E to W; material in the W half of continued as L05D1-116.
Matrix:	Hard-packed dark brown fill with a high concentration of pottery. A patch of gray floor-like material was uncovered in the SW corner of the locus, but it was judged too soft for a true floor. Special finds: stamped Rhodian amphora handle (05D1-0692), 1 Attic RF sherd (05D1-0732).
Relations:	L05D1-096 is covered by L26199 and L05D1-077. It reaches W26100 to the N, and is cut on the N by the robbing trench for that wall, L05D1-095. L05D1-096 is cut on the E by L05D1-044. To the S, L05D1-096 reaches W5680, and L05D1-119; other material S of L05D1-096 and W of W5680 was removed in AQ/13 in 2000. L05D1-096 reaches W16373B to the W. L05D1-096 covers L05D1-113, L05D1-116 and the top of the northern face of W10078.

Additional Observations/Value:

Medium value: fill with mainly Hellenistic pottery, reaching phase 2 and phase 3 walls.

summary: _____

Opened:	To remove the continuation of British trench L04D1-128 and L05D1-039 in AR/14.
Limits(N)	W16634, L05D1-098, L26197
(S)	L05D1-095
(E)	L05D1-044
(W)	L05D1-094
Closed:	End of season.
Matrix:	Soft yellow sand with minimal pottery.
Relations:	<p>L05D1-097 is the continuation of the British trench to the W. It was covered by L26126, which was excavated as a sand pit; cleaning in the area of L26198 showed that the sand continued to the NW. L05D1-097 cuts all the loci around it: to the N, L05D1-098 and the locus below it, L05D1-123; to the W, L05D1-044; to the S, L05D1-095; to the W, L05D1-094.</p> <p>The relation of L05D1-097 at the N with possible robbing trench L05D1-121 is uncertain because the sandy fill of L05D1-097 could not be traced any further N than the southern face of W16634. However, the bottom of L05D1-097 was not reached, since the sandy fill continued down at the extreme NW corner of the locus.</p>

Additional Observations/Value:

Low value.

summary: _____

Opened:	L05D1-096 came down on the first course of the north face of W10078, as well as a soil change between the eastern and western halves; the western half was continued as L05D1-116.
Limits(N)	W26100, L05D1-095
(S)	W10078
(E)	L05D1-113
(W)	W16373B
Closed:	End of season.
Matrix:	Hard-packed reddish fill with a large amount of pottery. Special find: I Attic RF sherd (05D1-0813).
Relations:	L05D1-116 is covered by L05D1-096. L05D1-116 reaches the second course of W26100 to the N, and is also cut on the N by the robbing trench for that wall, L05D1-095. On the E, L05D1-116 reaches L05D1-113. L05D1-116 reaches the topmost course of W10078 to the S. To the W, L05D1-116 reaches the second course of W16373B.

Additional Observations/Value:

Medium-low value: unsealed fill reaching phase 3 walls.

summary: _____

Opened:	to remove fill below F26198 and L26223.
Limits(N)	W16634, L05D1-097
(S)	W26100, L05D1-095
(E)	L05D1-097
(W)	W16373B
Closed:	End of season.
Matrix:	Hard-packed slightly reddish soil, with a large amount of pottery, with a very few shells, some bone, and a few fragments of wall plaster. 1 special find: loom weight (05D1-0859).
Relations:	L05D1-094 is covered by floors that were found at the end of the 2000 season, F26198 and floor makeup of L26163, L26223. Their state of preservation was poor, so L05D1-094 is covered but not sealed by F26198 and L26223. L05D1-094 reaches W16334 to the N. On the E, it is cut by British trench L05D1-097. To the S, L05D1-094 reaches the bottom of the first course of W26100, and is cut by the robbing trench for that wall, L05D1-095. L05D1-094 reaches the first course of W16373B to the W.

Additional Observations/Value:
Medium value: fill below floor level, reaching first course of a phase 3 wall (W26100).

summary: _____

Opened: To reassign a number to a wall previously thought to be the southern continuation of W04D1-125 (AQ-15); see attached card from 2004 season.

Limits(N)	L04D1-038
(S)	L04D1-089
(E)	L04D1-088
(W)	unassigned

Closed: Not closed.

Matrix: N-S wall: three ashlar stretchers. Two courses are currently visible: only one ashlar stretcher in the top course and two ashlar stretchers in the second course. The ashlars measure approximately 0.45 x 0.35 m.

Relations: RT L04D1-087 came down on a wall thought to be the southern continuation of W04D1-125 (AQ-15).

Robber trenches L04D1-038 and L04D1-089 cut W05D1-090 to the north and south, respectively (see card for L04D1-038 for further relations for the robber trench).

The thick plaster hypocaust floor of the Phase 1 bathhouse F04D1-088 reaches W05D1-090 at the east.

In the 2005 season, it was realized that these were not the same walls because they are slightly out of alignment and have differing construction. The southern wall, now called W05D1-090, is clearly floating in the baulk between AQ 12 and AQ 13.

Additional Observations/Value:

High value: wall reached by hypocaust floor F04D1-088.

summary: _____

Opened: To remove disturbed fill to the north and east of L05D1-045 (sealed fill below mudbrick structure L05D1-041).

Limits(N)	L26205
(S)	W26000, L05D1-045
(E)	W26073
(W)	W26160

Closed: When brought level with material to the north previously excavated in the 2000 season.

Matrix: Brown soil fairly compact in the south and loose in the north with little pottery and bone.

Relations: L05D1-046 was covered and not sealed by the eroded mud brick structure L05D1-041, which equals L26226 from the 2000 season.

The relations in the 2000 season: robber trench L26205 cut L05D1-045 in the north, W26000 (Big Mother wall) cut it in the south, W26073 cut it in the east and W26160 cut it in the west.

After five years of exposure, the bricks (L05D1-041) were substantially eroded as was the fill below. Thus L05D1-046 was opened to the north and east of L05D1-045 (sealed fill below mud bricks L05D1-041) as unsealed and possibly disturbed fill below the level of the mud bricks.

Around 10-15 centimeters of fill was also removed from the west (W26160) as cleaning to ensure the material in L05D1-045 was not contaminated. The pottery from this cleaning was not kept, but examination in the field revealed that it was indeed disturbed.

L05D1-046 was closed when it was brought level with material to the north previously excavated in the 2000 season. No loci were assigned below this season.

Additional Observations/Value:

Low value: disturbed fill.

summary: _____

Opened:	Opened to excavate what remained of the mud brick structure found in the 2000 season.
Limits(N)	L26205
(S)	W26000A
(E)	W26073
(W)	W26160
Closed:	Mud brick removed.
Matrix:	Mud brick (very compact dark brown soil) with little pottery, bone and shell.
Relations:	<p>In the 2000 season, unsealed fill L26193 came down on four mudbricks called L26226 (photographs from 2000 should have this number: #193180-193915). In the 2005 season, the feature was assigned a new number: L05D1-041.</p> <p>The relations in the 2000 season: robber trench L26205 cut the mud brick in the north, W26000 (Big Mother wall) cut it in the south, W26073 cut it in the east and W26160 cut it in the west.</p> <p>After five years of exposure, the bricks were substantially eroded. To begin excavation of their remains, around 5 centimeters of brick material was removed from the top and around 10-15 centimeters from the sides (from W26073 and W26160) to ensure the material was not contaminated. The pottery from this cleaning was not kept, but examination in the field revealed that it was indeed disturbed.</p> <p>L05D1-045 was opened as sealed fill below the mud bricks. L05D1-046 was opened as unsealed fill below the level of the mud bricks to the north and east of L05D1-045.</p>

Additional Observations/Value:

High value: sealed mudbrick cut by the Big Mother wall.

summary: _____

Opened:	To assign a number to a wall that has been exposed since 1997.
Limits(N)	L05D1-061, L05D1-071
(S)	material excavated in AR-15 in 1997
(E)	W16150B
(W)	W16127B
Closed:	Not closed.
Matrix:	Small ashlar headers, the largest of which measures 0.30 x 0.55 m. The number of courses will remain unclear until further excavation.
Relations:	<p>Fills L05D1-061 and L05D1-071 reach W05D1-129 at the north. The southern limit is unclear at this time, since the wall was first exposed in 1997 and was not assigned a number until 2005.</p> <p>To the east, W05D1-129 abuts Stage B of W16150 (Nike wall).</p> <p>To the west, W05D1-129 dovetails Stage B of W16127.</p> <p>NB: These elevations are estimates only because the wall number was assigned at the end of the season when no transits were on the tel. The matrix description and relations are likewise provisional and will require further cleaning and excavation to clarify. Although this wall appears on the top plans, I do not believe that it has been properly drawn. It has not been photographed with the adjacent walls, because the number was assigned after final square photos.</p>

Additional Observations/Value:

High value: wall.
